

Process Technology Strengthens Power Solutions with Kepco Inc. Acquisition

Process Technology expands and acquires Kepco Inc.

Ohio, United States Jul 17, 2025 ([IssueWire.com](https://www.issuewire.com)) - **Process Technology** is revered for its innovative thermal and power supply solutions, which can help to change the world. The company is proud to announce its acquisition of **Kepco Inc.** Power Supply, a company in New York best known for its innovation and quality in electronic products. Kepco has been serving its innovative power solutions for 75 years now. The integration with Kepco Inc. enables Process Technology to advance its capabilities and serve a wider range of industries across the U.S. and worldwide. This will also allow the company to have a well-elaborated portfolio with high-quality products and services. The official acquisition will take place on March 6, 2025.

The President of Process Technology, Jody Richards, said that “by integrating their advanced power supply technology and production expertise, we will deliver even more innovation, reliability, and support to our customers,” which shows the current goal of the company ahead. The CEO, Sid Srivastava, also assured to offer more innovative solutions that can “drive performance, efficiency, and energy savings.” Uniting ties with Kepco Inc. Power Supply, Process Technology is looking forward to a bigger and brighter future. Kepco, now operating as KEPCO Dynatronix

Process Technology is one of the leading and reliable global leaders in the field of thermal heating and power supply solutions for various sectors, including semiconductors, medical, solar, automotive, and industrial applications. The company has been serving in the niche since its inception in 1978. Its Global Headquarters and New Product Development Center are located in Willoughby, OH, from where the company is expanding to New York with the acquisition of Kepco Inc. Power Supply. With uninterrupted services and delivery of high-quality products at a fairly reasonable cost, Process Technology is looking forward to a sustainable future that offers more options to save energy and nature as well.
