Macon, Georgia May 28, 2025 ([Issuewire.com](https://www.issuewire.com)) - The Park Group which is a renowned website development and [digital marketing agency in Macon](#), Georgia is now offering custom website development for health care website development in Macon, Georgia for healthcare professionals and

medical experts.

Scott Park, one of the founders of the company, said, "We have created these packages to support our fellow businesses during the Coronavirus pandemic. Our new monthly plans are much more affordable than single-time payments and include all features of a premium website development project. Most importantly, we manage every aspect of the development process, allowing our customers to focus on their projects. There are various website development packages to choose from, depending on a business's specific requirements.

The Park Group offers a single-page website, the most popular choice for small to medium businesses. These websites promote continuity and fluidity for the user and look to be more modern and engaging than other alternatives. This package is ideal for those looking to start up a business and want their aims and offers to be clear and concise.

For medium to large businesses, the multiple-page website packages as per the business's needs. Companies looking to expand their website beyond a single page will find this package to be ideal. This may include service pages, blog pages, or whatever their business desires.

The Park Group takes care of everything from start to finish when it comes to [healthcare website development Macon](#). Their brand-name domain names, hosting, and custom mobile-friendly design and coding are all included in their new website development packages. The aesthetics will be created to perfection, with the company choosing all appropriate illustrations and photos, and ensuring that the copywriting is engaging and professional. The Park Group will also take care of all maintenance and updates that the website may require, as well as its onsite search engine optimization.

Web portals included in a healthcare website

Patient portal with telemedicine functionality: This portal provides patients with access to their health information, appointment scheduling, virtual care, etc. Also includes patient portals for mental health.

Portal for healthcare employees: This portal has HR software to automate workflows, share expertise within the medical team, etc.

Portal for diagnostic laboratories: This portal helps patients to schedule appointments, view test results, pay for laboratory services online, etc.

Pharmacy portal: This portal allows patients to order refills online, purchase over-the-counter medications and wellness products, book on-site pharmacy services, etc.

Wellness and preventive care portal: This portal helps to participate in risk assessments and receive recommendations for preventive care services, as well as for proactive health management.

Clinical trial participant portal: This portal lets patients view trial-related information, perform trial activities remotely, receive training and support, etc.

Healthcare information portal: This is for storing medical articles, information about drugs and symptoms, news, etc.

Medical supplier portal: This portal allows providers of medical supplies, equipment, and

pharmaceuticals to submit their offers, participate in sourcing events, and receive orders.
