

Virtual Reality and Augmented Reality are changing how we learn, play, and explore

Agamverse launches to bring immersive VR and AR solutions to education, wellness, and exploration.

Surat, Gujarat May 29, 2025 ([Issuewire.com](https://www.issuewire.com)) - Agamverse Launches to Transform Learning and Well-being Through Immersive VR/AR Experiences

Agamverse, a next-generation immersive technology company founded in 2024, is on a mission to reshape how people engage with the world through Virtual Reality (VR) and Augmented Reality (AR). Spearheaded by founder and CEO Akshay Devikar, Agamverse builds intuitive, emotionally resonant virtual experiences that educate, inspire, and promote well-being.

From calming meditation environments to dynamic STEM simulations, Agamverse is developing high-impact digital spaces for all age groups. Children can explore memory-boosting VR games, while learners of all ages benefit from interactive science and math worlds. The company's exploration zones also allow users to virtually travel through natural wonders, historical sites, and futuristic landscapes.

"Our goal is to blend technology with purpose," says Akshay Devikar. "We want to help people learn better, feel better, and dream bigger — through immersive journeys that were never before possible."

Agamverse is not just building virtual environments — it is shaping the next dimension of human experience.
