

Capzul Demonstrates the Future of Cybersecurity with Unbreachable Technology at InfoSec 2025

At the recent and extremely successful cybersecurity event, InfoSec2025, held in London, Capzul invited pentesters around the world to breach the server they were protecting and offered a substantial cash prize, but none were able to do so.

Toronto, Ontario Jun 12, 2025 ([Issuewire.com](https://www.issuewire.com)) - Capzul Corp., an innovative startup company focussed on the cybersecurity market, and the developer of CapzulProtect and CapzulConnect, is pleased to announce that its three-day live Capzul Challenge at InfoSecurity Europe 2025 concluded without a single breach—repeating its flawless performance at last year’s Brazil Hackathon Challenge.

Held at ExCeL London during InfoSecurity’s 30th-anniversary edition, a show that drew more than 13,000 security professionals and close to 400 exhibitors, the Capzul Challenge invited every visitor, exhibitor, large cyber organisations and pen-testers to locate and compromise a server, protected by Capzul’s zero-attack-surface cybersecurity patented and proprietary technology. The result? The server protected with Capzul’s technology remained uncompromised when the doors closed at 16:00 BST on 5 June. The bounty of £25,000 was unclaimed.

Capzul’s objective was clear: to demonstrate and prove to the world that a server, protected by Capzul’s revolutionary approach to cybersecurity, cannot be compromised. With attacks initiated all over the world, over three days, peaking at over 1,000 attempts per second, not a single attack identified the location of the server, not a single attack breached the Capzul protected server.

“Running a live hackathon on a show floor this big, without breaking any house rules, was the ultimate confidence play,” said Guy Paterson, COO of Capzul. “While other vendors showcase AI-assisted solutions that react to threats, we demonstrated a platform designed and developed to resist AI driven attacks.”

Capzul, in partnership with UK-based Cyro Cyber and InfoSecurity, delivered a seamless and technically flawless cybersecurity live challenge that highlighted the strength of the Cyro Cyber infrastructure and Capzul’s patented and proprietary technology that proved again to be impenetrable.

Cyro Cyber is a managed security services provider protecting critical IT and OT systems in military, public, and commercial sectors. They specialise in compliance, offensive security testing, secure system design, and 24/7 monitoring through their UK-based security operations centre, ensuring end-to-end protection against evolving cyber threats.

About Capzul

Headquartered in Toronto, Canada, with offices in London, UK and Belo Horizonte, Brazil, Capzul is a cybersecurity firm that intends to revolutionize the global internet security market by offering a disruptive and innovative cybersecurity platform, with CapzulProtect and CapzulConnect being its first released solutions.
