

MedJoin Global Healthcare Collaborates with Sky Hospital & Research Institute to Empower Clinical Fellowship Training

MedJoin Global Healthcare Partnership with Sky Hospital & Research Institute

Imphal, Manipur Jun 12, 2025 ([Issuewire.com](https://www.issuewire.com)) - <https://www.medjoinhealthcare.in/>, **MedJoin Global Healthcare**, a prominent online medical education organization, has announced a milestone collaboration with **Sky Hospital & Research Institute Manipur**, one of the leading hospitals in India delivering advanced clinical care with a foundation of research. As part of its commitment to revolutionizing clinical training for medical doctors, this partnership should effectively close the gap between learning and experience for those enrolled in fellowship programs through MedJoin, including MBBS and MD doctors.

MedJoin was founded by [Mr. Naresh Chauhan](#). He is committed to delivering accessible, high-quality medical education to a doctor population across India and abroad (nation-wide and throughout the world). The approach to this dream is to provide structured academic content, opportunities for continuous professional development, and clinical experiences to increase real-world clinical competence. MedJoin's partnership with Sky Hospital & Research Institute Manipur will provide a proper clinical training context that will allow doctors to achieve all of these functional goals.

[Sky Hospital & Research Institute](#) Manipur, led by the inspiring **Dr. Lairikyengbam Shyamkishore Singh**, is recognized as one of the leaders in the healthcare sector, with an exemplary reputation in cardiology. The organization includes not only clinical services, but also research and technology-supported care, and a long commitment to teaching. The institution has the facilities, clinical diversity, and other features that make it an excellent place to work and train practically in medicine.

A Shared Vision for Clinical Excellence

The partnership aims to blend MedJoin's academic fellowship modules with practical clinical exposure in Sky Hospital, and doctors enrolled in the Fellowship Programs offered by MedJoin will be able to rotate through the various departments of Sky Hospital under the supervision of individual mentors and very experienced consultants.

Practical exposure is meant to reinforce, develop, and improve diagnostic skills, clinical decision-making and procedural skills which are undoubtedly very difficult to gain and fully understand through online learning alone. The practical experience will provide trainees the opportunity to see high patient volumes, a broad presentation of cases and evidence-based treatment pathways in a real-time clinical hospital environment.

Mr. Naresh Chauhan, Founder & Director of MedJoin Global Healthcare and NCSofttech which is Digital Marketing Agency in India, Commented on this collaboration:

"We are glad to collaborate with Sky Hospital, this partnership is a significant milestone in our journey to empower the next generation of doctors. Our mission has always been to combine flexible online learning with exposure to real clinical settings, and partnering with an institution of this caliber as Sky Hospital is a promising guarantee that our fellows will have the best of both worlds - a thorough academic depth and the ability to practice amazing clinical acumen."

Dr, Lairikyengbam Shyamkishore Singh, Founder and Director of Sky Hospital, Stating on this Collaboration:

"We're proud to partner with MedJoin to support the clinicians of the future! We believe in fostering young doctors through theoretical knowledge and clinical experience. Our hospital has an increasingly vibrant learning environment whereby fellows will see a variety of clinical scenarios, learn multidisciplinary care, and practice decision making with the support of senior specialists."

Scope and Structure of Fellowship Programme

MedJoin's Fellowship Programmes are for licensed medical graduates (MBBS, MD or equivalent) and are between 6 to 12 months, depending on the specialty. The didactic aspects of the programmes involve recorded lectures and live webinars presented by content specialists, case-based discussions, virtual clinical grand rounds, periodic assessments and quizzes to monitor progress, and research methodology & academic writing workshops.

One of the highlights of the programme is the clinical rotation based at Sky Hospital & Research Institute, Manipur. The sessions are hands-on rotations with trained consultants in the areas of patient care under the guidance of experienced consultants. The fellows are expected to actively observe and assist the cases under care, taking part in the ward rounds, outpatient clinics, and hands-on participation in minor procedures with the supervisor present. The format will ensure balanced exposure to inpatient care and outpatient care, as well as diagnostic work and therapeutic procedures.

Dr. Lairikyengbam and his multidisciplinary team will closely monitor the fellows and provide guidance, through a combination of direct observation and structured feedback/purposeful discussion sessions. In addition to the clinical training, the fellows will participate in clinical meetings, journal club meetings, and departmental seminars, etc., to further improve the hands-on experience with a well-researched academic basis.

Empowering Medical Professional for the Future

In the healthcare system increasing complexity around the world, there is an increasing need for well-trained, clinically active competent doctors. The partnership between MedJoin Global Healthcare and Sky hospital intends to address this need by making sure that medical professionals are receiving not just the academic background but also the clinical maturity necessary to provide high-quality health care.

This is specifically going to benefit doctors who practice in Tier 2 and Tier 3 cities, who often do not have access to tertiary care facilities and other highly skilled clinical mentors. With MedJoin's digital learning and Sky hospital's training environment, they can get first-rate learning opportunities and clinical exposure without having to provision for long durations, usually leaving their home state.

"The future of healthcare is contingent on how we train doctors today," Mr. Chauhan said: "we're proud to say that through this partnership, we are not only educating; we are empowering doctors to act confidently in every clinical scenario."

A Vision for Nationwide Impact

Both MedJoin and Sky Hospital envision this partnership as a scalable model that could be implemented with other institutions both in India and internationally. The aim is to form a network of educational-clinical partnerships that improve the standard of postgraduate medical training to that of established standards, especially for general practitioners and burgeoning specialists.

With advancements in telehealth, remote monitoring, and AI-based diagnostics, clinical practice today is changing at lightning speed, and the training programs must innovate as well, allowing young doctors to receive not just knowledge, but also agility, compassion, and clinical excellence. The MedJoin-Sky Hospital partnership is a perfectly timed response to this heteroglossia.

Future collaborations are planned to introduce simulation-based modules, virtual mentoring opportunities, and faculty swaps, as MedJoin-Sky Hospital continues to grow and adapt.

Recent Clinical Training At Sky Hospital

Many fellows have already started their hands-on rotations as part of the pilot batch and have reported exciting outcomes. The doctors have noted increased confidence in their clinical decision-making, greater familiarity with disease trends and variation and improved procedural skill.

Dr. Stanly Binagi, brightened up the chances of being the first doctor who initiated hands-on ward training at Sky Hospital & Research Institute, Manipur, as a current enrolled [Fellowship Programme](#) resident. Dr Binagi summarized his experience with the fellows programme as "transformational" and credited the team at Sky Hospital with its mentorship and openness to teaching.

"I am very thankful for the learning opportunities at Sky Hospital; direct involvement in care of patients

in a real-time, high-volume cardiac center with Dr. Lairikyengbam and his team has aided my growth as a clinician and individual. The hands-on experiences are a great add-on to the online curriculum in a way that makes the overall program very holistic."

Conclusion

MedJoin Global Healthcare's collaboration with Sky Hospital & Research Institute Manipur is leading a shift in medical fellowship training that will merge aspects of online education with the unmatched value of bedside education. By combining their unique visions, infrastructure, and expertise, both organizations are establishing a new benchmark in medical education for all of India and beyond. As more doctors like Dr. Stanly Binagi pursue this blended learning and clinical integration, India's patient care landscape is looking more competent, confident, and compassionate.

The collage consists of four distinct images. On the far left is a promotional brochure for MedJoin Global Healthcare's 'FELLOWSHIP IN CLINICAL CARDIOLOGY'. The brochure features the company logo, the tagline 'HEAL HEART SHAPE FUTURES', and a list of benefits under 'WHAT YOU'LL GAIN' and 'HIGHLIGHTS'. It also includes a phone number (+91-6370182504) and an 'APPLY NOW' button. To the right of the brochure are three portrait photographs. The first is a man in a light blue button-down shirt standing outdoors with his hands clasped. The second is a man with a beard and mustache, wearing a light blue shirt, looking directly at the camera. The third is a man in a white lab coat and glasses, standing against a blue background.
