

Press Conference to Present Soviet-Era UFO Reverse Engineering Docs, June 11 in Malden

Newly translated Soviet-era engineering documents—believed to describe UFO reverse engineering—will be presented publicly for the first time by the late scientist's daughter and a retired U.S. intelligence contractor.

Malden, Massachusetts Jun 8, 2025 ([IssueWire.com](https://www.issuewire.com)) - Media and Public Invited to Attend. Wednesday, June 11, 9:30–11:30 AM — Malden Irish American Club, 177 West St, Malden, MA.

The public is invited to a press conference announcing the release of *Engineering Infinity: Earth's First Interstellar Blueprint*—a newly translated archive of Soviet-era documents detailing Cold War efforts to reverse-engineer UFO propulsion and spaceflight systems.

The documents were left behind by the late Valerijs Černohajev, a Soviet aerospace engineer, and inherited by his daughter—Latvian-born and now Boston-based opera singer Natalja Sticco. Together with her husband, retired USAF Staff Sergeant and intelligence contractor Gene Sticco, and Mario Fialho, an Enterprise Systems Architect, the team has spent four years translating, analyzing, and investigating the documents' scientific and national security implications.

Special guest Jim Awrach, Field Investigator with **MUFON Massachusetts**, will join the press event to offer remarks and a professional perspective on the value of these materials to the broader UAP (unidentified anomalous phenomena) research community.

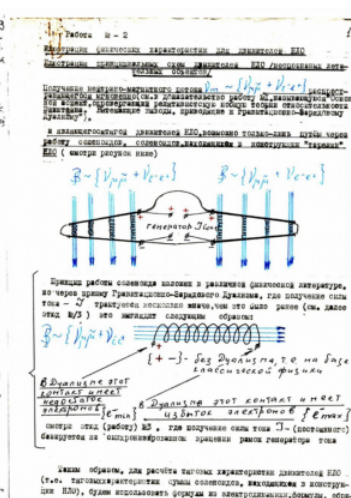

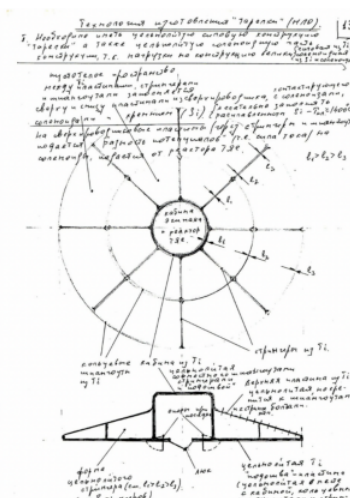

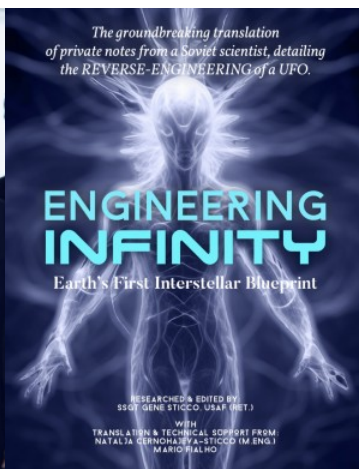

Key takeaways will include:

- The archive's authenticity and technical depth
- Correlations between the physics described and global patent filings from the U.S., Russia, and China
- Its potential contribution to ongoing disclosure efforts and international security discussions

Hard copies of the book will be available. Members of the media, citizen journalists, researchers, and the public are encouraged to attend.

Engineering Infinity: Earth's First Interstellar Blueprint is available now at www.engineeringinfinitybook.com, as well as on Amazon and Barnes & Noble (ISBN: 979-8347592913).
