

PTFS Introduces the Knowvation CSP to the AWS Marketplace

Washington, D.C, District of Columbia Jun 19, 2025 ([Issuewire.com](https://www.issuewire.com)) - PTFS, a leading provider of knowledge management, geospatial, declassification solutions, and digitization services, today announced that Knowvation CSP is now available in AWS Marketplace, a curated digital storefront helping companies of all sizes find, try, buy, deploy, and manage solutions from AWS Partners.

Availability in AWS Marketplace makes it easier for Amazon Web Services (AWS) customers to utilize Knowvation to implement a federated search capability using index-in-place technology in combination with data ingestion, OCR, and AI technologies. Using a web-based administrative GUI for configuration, Knowvation can index data in place for existing file shares, repositories, and other systems such as SharePoint, G-Suite, and Laserfiche, to subsequently build a federated index with full protection of the integrity and authenticity of the data.

Key features of Knowvation include:

- The Knowvation Content Services Platform (CSP) provides a unified view of all your data wherever it is stored, and eliminates challenges of various systems and organizational silos.
- Our content services platform supports digital asset management, content management, and geospatial intelligence for structured and unstructured data using fuzzy search, document intelligence, and dynamic redaction.
- Knowvation CSP provides a unified view of all your data wherever it is stored, and eliminates challenges of various systems and organizational silo.
- The Knowvation CSP is easy to integrate with RESTful Web Services and API's

Knowvation is now generally available in AWS Marketplace. To read more about Knowvation, please visit <http://www.ptfs.com/knowvation>

About Knowvation CSP

PTFS's Cloud-based intelligent search, continuous federated indexing, digital object management, and geotagging platform, Knowvation CSP™, combines a robust content management capability with technology allowing organizations to find and use their data regardless of its source repository and location. This allows organizations to manage their data in different ways using the same system. An information management strategy can be supported that allows groups to manage their data the way they have done for years, while others can migrate data to a centralized repository. The key is "federating" technology, which provides for the discovery of all of an organization's data that may be stored locally, or in many places, or across geographically dispersed repositories. Using index-in-place technology combined with data ingestion provides a "one search finds all" data discovery capability while at the same time protecting data, thereby facilitating records management operations. Knowvation provides tools to help make non-searchable data (images and PDF files) searchable. Tools include Optical Character Recognition (OCR) for OCR'ing data on ingest and auto-geotagging tools that extract geospatial information from unstructured text.

About PTFS

Progressive Technology Federal Systems, Inc. (PTFS) has been a leading enterprise Content Services

Platform (CSP) to Federal, Civilian, and DoD agencies since 1995. Furthermore, Knowvation® (formerly ArchivalWare™), our CSP application, has been in production since 2003. Best known for providing knowledge management, geospatial, and declassification solutions, Knowvation now offers content management as a service. We can also help you with digitization, system integration, application installation/configuration, content loading/organization, training, staff augmentation, and ongoing support services.
