

## SwishID Launches as a Game-Changer in Global Identity Verification

**SwishID**  
Your Digital Identity

**Lexington, Kentucky Jun 9, 2025** ([Issuewire.com](https://www.issuewire.com)) - Swish World Group has officially launched SwishID, a powerful new identity verification platform built to serve businesses, governments, and individuals around the globe. Combining real-time biometric scanning, automated document verification, and a unified international credit scoring system called SwishScore, the platform is positioned to revolutionize how trust and identity are managed online.

SwishID is designed to meet the world's most rigorous standards for data privacy, cybersecurity, and legal compliance. It supports GDPR, eIDAS, NIST 800-63, and ISO 27001 compliance out of the box — making it ideal for both public and private sector integration.

“We built SwishID to be the most secure, private, and interoperable identity platform available,” said James van Houten, CEO of Swish World Group. “Identity verification should empower users — not lock them into outdated or invasive systems. SwishID gives people control while helping businesses and governments fight fraud and streamline onboarding.”

Features include:

- Biometric Verification: Facial scanning and matching using AI with no human review
- Document Upload + OCR: Passport, license, and ID verification with fraud detection
- SwishScore™: A 1–10 global credit score system for trusted transactions
- Government-Grade Security: All data encrypted, anonymized, and zero-trust by default
- Full Developer API: Plug-and-play for platforms, banks, travel apps, and telecoms

SwishID is now open for business partnerships and developer access. Early adopters include fintech companies, online marketplaces, and healthcare providers across Europe and North America.
