

TechBuilder Launches Next-Gen Taxi Booking App Development Services for Global Startups

TechBuilder is a mobility-focused software company specializing in white-label, scalable solutions for ride-hailing, food delivery, logistics, and multi-service super apps. Known for speed, flexibility, and innovation.

Middletown, Delaware Jun 23, 2025 ([IssueWire.com](https://www.issuewire.com)) - TechBuilder, a major name in mobility technology, has officially launched its next-generation **Taxi Booking App Development** services, aimed at ambitious startups and enterprises wanting to disrupt the urban transportation industry. With

the growing demand for on-demand mobility solutions, TechBuilder intends to empower entrepreneurs to create Uber and Careem-style taxi platforms with unparalleled speed, scalability, and customisation.

TechBuilder's new offerings include AI-powered, white-label **taxi booking software solutions** that can be launched rapidly and scaled globally.. The solution is engineered for flexibility, allowing clients to add services like food delivery, logistics, and in-app payments, making it ideal not just for taxi startups but for anyone building a super app ecosystem.

TechBuilder says, "We're not just offering a taxi app; we're offering a launchpad for businesses that want to innovate in the mobility space,". "Whether you're building a city-specific service or aiming to become the next big super app, our [taxi booking app development](#) platform gives you the speed, power, and customization you need."

Built for Speed and Scale

With TechBuilder's pre-coded modules and optimized development stack, startups can launch a fully branded, high-performance taxi booking app in as little as 2–3 weeks. The platform offers iOS and Android apps for both riders and drivers, as well as a powerful web-based admin dashboard.

The key features include:

- Real-time ride tracking and smart dispatch.
- Dynamic pricing based on demand and traffic
- Multiple payment choices (cards, UPI, wallets, and cash).
- Driver earnings dashboard and insights
- Multi-city support with centralized management
- AI-powered behavior tracking and route optimising

Empowering Startups Around the Globe

From Europe to Southeast Asia and the Middle East, TechBuilder has already empowered dozens of mobility startups to launch their Careem clone and Uber-like app solutions. TechBuilder offers complete end-to-end support, right from idea validation and UI/UX development to app deployment and post-launch enhancement.

Startups are advantageously provided with:

- No-code or low-code setup solutions
- Affordable development without having to hire big tech teams
- Scalable infrastructure that is capable of serving 1 M+ users
- Ongoing post-launch support and maintenance

TechBuilder aligns with global trends.

The world ride-hailing industry is expected to hit \$157 billion by 2025, fueled by urbanization, smartphone adoption, and digital payments. TechBuilder's solution is designed to capitalize on this trend by allowing companies to go-to-market faster and evolve smarter with AI, localization, and modular technology.

TechBuilder developers say, "We built this platform to remove the traditional barriers to entry — cost,

time, and tech complexity". "Now, anyone with a strong idea can go live with a professional, **scalable taxi app** without months of development."
