

TMS Therapy in Grand Junction Offers New Hope for Depression Patients Seeking Drug-Free Relief

Transcranial Magnetic TMS therapy in Grand Junction is designed for individuals who have not achieved sufficient relief from traditional antidepressant medicationsVA

Salt Lake City, Utah Jul 7, 2025 ([IssueWire.com](https://www.issuewire.com)) - Individuals battling treatment-resistant depression in Western Colorado now have access to one of the most innovative mental health treatments available today: **[Transcranial Magnetic Stimulation VA](#)**. Offered through TMS Solutions, this non-invasive, FDA-cleared therapy is now available locally, making it easier than ever for patients to access

advanced depression treatment without the burden of long travel or medication side effects.

TMS therapy in Grand Junction is designed for individuals who have not achieved sufficient relief from traditional antidepressant medications. TMS works by delivering gentle magnetic pulses to specific areas of the brain known to regulate mood, effectively stimulating underactive neural pathways. Unlike medication, TMS does not enter the bloodstream and avoids systemic side effects such as weight gain, sexual dysfunction, or fatigue.

“With the growing mental health crisis in the U.S., it’s critical that communities like Grand Junction have access to cutting-edge treatments,” said a spokesperson for TMS Solutions. “We are proud to offer **TMS therapy in Colorado** that gives patients renewed hope and the possibility of long-term relief.”

Each TMS session lasts about 20 minutes and is performed in a comfortable outpatient setting. The typical treatment course is five days a week for four to six weeks, with many patients reporting noticeable improvement in symptoms within the first few weeks.

TMS Solutions has been a leader in providing **advanced depression treatment** across Colorado, and the Grand Junction location extends its mission to reach even more patients. Their experienced providers offer personalized care plans and free consultations to help determine if TMS is the right option.

According to clinical research, up to 70% of patients treated with **Transcranial Magnetic Stimulation (TMS) therapy** experience a significant reduction in symptoms, and about half achieve full remission. TMS Solutions is dedicated to delivering these results in a compassionate, patient-first environment.
