

Veritas Global Protection Launches Specialized Electric Vehicle Service Contracts to Meet Growing EV Demand

New EV Protection Plans Provide Cost-Effective Alternatives to Traditional Warranties for Electric Vehicle Owners

Phoenix, Arizona Jun 2, 2025 ([Issuewire.com](https://www.issuewire.com)) - Veritas Global Protection, a leader in vehicle service contracts, has expanded its portfolio with a new range of offerings designed specifically for electric vehicles (EVs). With the rapid rise in EV adoption, Veritas aims to address the unique needs of this emerging segment through comprehensive EV protection plans that deliver essential coverage for today's electric vehicle owners.

Electric vehicle ownership continues to grow steadily, bringing new expectations for vehicle protection and long-term reliability. Traditional service contracts often fall short of covering electric-specific components such as batteries, electric drive motors, and high-voltage systems. Veritas Global Protection recognized this gap and responded by creating tailored electric vehicle service contracts that provide robust and relevant coverage.

The electric Veritas EV protection plans include multi-level options, allowing customers to select coverage based on their needs and budget. Coverage options range from protection for major components like electric batteries and drive systems to exclusionary plans that encompass nearly every mechanical and electrical part of the vehicle. Each plan comes with additional benefits such as

emergency roadside assistance, rental car reimbursement, and trip interruption coverage to support drivers through unexpected repairs.

A key differentiator of Veritas' EV service contracts is their inclusion of electric and hybrid battery coverage—even addressing battery degradation when capacity drops below 70%. While some providers exclude these critical components, Veritas ensures that electric vehicle owners are protected against some of the most costly repairs associated with EV ownership.

Veritas Global Protection's EV warranty alternatives are available for electric and hybrid vehicles up to 10 years old with less than 125,000 miles. Coverage is accepted nationwide, offering drivers flexibility and confidence no matter where the road leads.

The launch of these EV-specific protection plans marks an important milestone for Veritas Global Protection as the company adapts to changing trends in the automotive industry. By expanding into this fast-growing sector, Veritas continues to demonstrate its commitment to meeting the evolving needs of drivers and providing innovative solutions in vehicle service contracts.
