

AB Protocol Bridges Real-World Assets to Web3 Through First Modular DAO Ecosystem

AB Protocol launches modular RWA infrastructure and AB DAO. Its first on-chain donation to Timor-Leste children was recognized by President José Ramos-Horta, marking a milestone in tokenized philanthropy and decentralized governance.

Bangkok, Thailand Jul 14, 2025 ([IssueWire.com](https://www.issuewire.com)) - AB, a new generation blockchain infrastructure project, is thriving with a mission to bring real-world assets (RWA) to Web3 in a transparent, democratic, and community-based way. With the launch of AB DAO earlier this year, the team is pioneering decentralized governance and all aspects of tokenized social impact.

The protocol's stack includes:

AB Wallet: A non-custodial wallet that supports RWA tokens and decentralized identities.

AB DEX: A decentralized exchange for trading real-asset-backed tokens.

AB Bridge: Cross-chain RWA transfer infrastructure with a real-world validation layer.

AB Charity Fund: A dedicated funding mechanism to support global impact, including NFT-based proof of donations.

The most noteworthy milestone in Q2 2025 was one of AB's first on-chain donations to support underprivileged children in East Timor. The donation was praised by the public and received a certificate of honor from the President of Timor-Leste, José Ramos-Horta, marking an important recognition of AB's mission in the real world.

A member of the AB Foundation said: "We believe that RWA tokenization should prioritize trust, disruption, and real value to society. Through AB DAO, our ecosystem invites open participation from users, non-organizations, and developers."

AB DAO is designed as a governance layer that enables token holders and verified partners to jointly decide on funding relationship allocation, ecosystem expansion, and partner integration. The DAO also uses NFT missions to increase transfer and governance participation.

Looking forward, AB will focus on expanding partnerships in Southeast Asia and launching new staking tools based on RWA bonds and NFTs. We invite community members to follow AB's progress and contribute through open proposals.

About AB Protocol

AB Protocol is an open, autonomous Web3 infrastructure project focused on the secure listing, trading, and impact verification of real-world assets. It empowers global communities to co-govern and participate in asset-backed projects to promote social and financial innovation.
