

Algreen Tech Launches Revolutionary Bio-engineered Purifier for a Healthier Future

Hong Kong, Hong Kong S.A.R. Jul 10, 2025 ([Issuewire.com](https://www.issuewire.com)) - Algreen Tech, a pioneering force in sustainable biotechnology, has announced the release of its **revolutionary purifier**, a bioengineered system powered by microalgae that blends nature and science to tackle indoor air pollution in an entirely new way.

Harnessing the biological efficiency of live microalgae, the purifier doesn't just trap pollutants—it transforms carbon dioxide into fresh oxygen, acting as a living air-cleaning ecosystem. This nature-inspired solution outperforms traditional passive filtration by continuously regenerating cleaner indoor air.

"This is more than a product—it's a step toward reimagining how we coexist with nature indoors," said **Manoj Jain**, Co-founder of Algreen Tech. "We're merging biology with technology to address one of the most critical issues of our time: air quality."

Designed for homes, offices, and public spaces, the system is quiet, energy-efficient, and low-maintenance. Its biological core and minimal carbon footprint position it as an [eco friendly air purifier](#) option for sustainability-focused consumers and businesses alike.

With this launch, Algreen Tech ushers in a new era of innovation—where clean air meets living technology.
