

appCURE Announces the Launch of Version 5

London, United Kingdom Jul 1, 2025 ([Issuewire.com](https://www.issuewire.com)) - appCURE, a leader in application transformation and modernization, today announced the official release of **appCURE STUDIO V5**, simplifying the migration & transformation of Windows Applications and delivery to Modern Desktop and Cloud Environments.

appCURE V5 delivers a massive leap forward in delivering choice back to the IT function in all business, government & service providers; in this release appCURE is introducing its agentic packaging AI and

updating AI.

Key Features and Enhancements in appCURE V5 Include:

- Brand new optimized Graphic User Interface (GUI)
- New packaging engines
- Full certification suite for app security
- Enhanced package editing and manipulation
- App Attach creation and testing
- Streamlined delivery options
- MSIX smoke testing
- Internet connected and offline (air gapped) licensing
- appCURE CAPTURE License free download
- Agentic AI modules integration

"appCURE have been working on the new release for some time, creating a new version built from the ground up to modern standards." said Steve Horne, CEO of appCURE. "The new release enables clients to migrate, transform and deliver application change better & faster than ever; this is the starting point on delivering our long-term vision around industrializing & giving clients a "silver bullet" approach around fixing and updating their applications automatically, reducing the cost and time burden that too many organizations have faced around keeping the application estate up to date."

To help clients understand more around appCURE's new release and strategic vision appCURE has launched its **Advocate Program**, this has been put into place to enable independent contact with companies who can answer your questions or help with your transformation project.

New customers can explore product features, case studies, and request a demo by visiting www.appcure.io
