

Axonic Health Launches AxonScribe: Revolutionary AI-Powered Clinical Documentation Platform

New solution combines advanced OCR technology with private AI to transform patient registration and clinical note-taking, reducing documentation time by 70% while ensuring complete data privacy

Pinner, Middlesex Jul 17, 2025 ([Issuewire.com](https://www.issuewire.com)) - Axonic Health, a leader in AI-powered healthcare technology with 70+ hospital deployments serving over 10 million patients globally, today announced the launch of AxonScribe, a groundbreaking clinical documentation platform that revolutionizes how healthcare providers handle patient registration and clinical notes. The innovative solution addresses the critical challenge of administrative burden that consumes up to 40% of physicians' time, allowing healthcare providers to refocus on patient care.

Addressing Healthcare's Documentation Crisis

Healthcare providers worldwide face an unprecedented administrative burden, spending an average of 2+ hours daily on documentation tasks. This has contributed significantly to physician burnout, reduced patient interaction time, and delayed care delivery. AxonScribe directly addresses these challenges through intelligent automation that maintains clinical accuracy while dramatically reducing time investment.

"Healthcare providers entered medicine to care for patients, not to spend their days buried in paperwork," said Prof. Abhay Chopada, founder of Axonic Health. "AxonScribe represents a fundamental shift in how we approach clinical documentation—using AI to handle the administrative

burden while physicians focus on what they do best: healing patients."

Revolutionary Two-Part Solution

AxonScribe offers healthcare providers unprecedented efficiency through two core capabilities:

1. Intelligent Patient Registration The platform's advanced OCR technology instantly scans and processes any patient registration form, automatically extracting demographics, medical history, insurance information, and other critical data. The system then validates and structures this information for seamless integration into existing EMR/EHR systems, reducing registration time from minutes to seconds.

2. AI-Powered Voice Documentation AxonScribe offers healthcare providers two flexible documentation options:

- **Live Consultation Recording:** AI captures and processes entire patient conversations in real-time, generating comprehensive clinical notes during the consultation
- **Post-Consultation Dictation:** Physicians provide a brief 2-3 minute voice summary after the patient visit, from which AxonScribe generates complete clinical documentation

From a single voice input, the platform automatically creates clinical letters, prescriptions with drug interaction checks, test orders with appropriate justification, referral letters, and other necessary documentation.

Privacy-First Architecture Sets New Industry Standard

Unlike cloud-based AI solutions that raise data privacy concerns, AxonScribe utilizes a privately hosted Large Language Model (LLM) architecture, ensuring that sensitive patient data never leaves the healthcare provider's premises. This approach delivers the benefits of advanced AI while maintaining complete HIPAA and GDPR compliance.

"Data privacy isn't an afterthought in AxonScribe—it's the foundation," explained Dr. Chopada. "Our private hosting model means healthcare providers maintain complete control over patient information while accessing the most advanced AI documentation capabilities available."

Measurable Impact Across Healthcare Settings

Early implementations of AxonScribe have demonstrated significant quantifiable benefits:

- **70% reduction** in documentation time
- **85% decrease** in administrative errors
- **90% improvement** in physician satisfaction scores
- **3x faster** patient registration processes
- **50% more time** available for direct patient care

The platform's configurable nature allows adaptation to various medical specialties, from primary care and emergency medicine to specialized practices and surgical environments.

Built on Proven Healthcare Technology Foundation

AxonScribe leverages Axonic Health's extensive experience in healthcare AI and clinical workflow optimization. The company's existing platform supports 70+ hospital deployments globally, processing over 10 million patient transactions.

"AxonScribe isn't our first venture into healthcare AI—it's the culmination of years of real-world experience in clinical environments," noted Dr. Chopada. "We understand the complexities of healthcare workflows because we've been successfully operating within them for years."

Comprehensive Implementation and Support

AxonScribe is designed for rapid deployment with minimal disruption to existing workflows. The platform offers:

- **2-hour setup** for most practices
- **Cloud or on-premise** installation options
- **Seamless integration** with major EMR/EHR systems
- **Comprehensive staff training** and ongoing support
- **24/7 technical assistance** for critical issues

Flexible Pricing and Risk-Free Trial

The platform is available through a per-provider subscription model starting at £25 per month, with volume discounts for larger organizations. Healthcare providers can evaluate AxonScribe through a comprehensive 30-day free trial that includes full system access, implementation support, and staff training.

Availability and Market Expansion

AxonScribe is immediately available for healthcare providers in the UK and will expand to additional markets throughout 2025. The platform supports multiple languages and can be customized for various regulatory environments and clinical practice standards.

About Axonic Health

Founded in 2016, Axonic Health is a leading provider of AI-powered healthcare technology solutions. The company's mission is to improve global healthcare access and efficiency through innovative technology platforms. With 70+ successful hospital deployments and over 10 million patient transactions processed, Axonic Health has established itself as a trusted partner for healthcare transformation. The company's comprehensive platform includes Health ATM technology, AI-powered clinical assistance, and now AxonScribe clinical documentation solutions.

Looking Forward: The Future of Clinical Documentation

As healthcare continues to evolve, Axonic Health is committed to advancing AxonScribe's capabilities through continuous innovation. Planned enhancements include expanded specialty adaptations, enhanced clinical decision support features, and deeper integration with emerging healthcare technologies.

"AxonScribe represents just the beginning of what's possible when we apply thoughtful AI to healthcare's most persistent challenges," concluded Prof. Chopada. "We're not just automating

documentation—we're restoring the human element to healthcare by removing the barriers that keep providers from focusing on patients."
