

BIOLOGICHEST - Innovative bio-waste container - 3D Printed

SAVOSA, Switzerland, July 19, 2025, MATRO Suisse Design has announced the launch of Biologichest, an innovative 3D-printed compost container designed to make home composting cleaner, more efficient, and visually appealing.

Canton Ticino, Switzerland Jul 25, 2025 ([IssueWire.com](https://www.issuewire.com)) - Swiss Startup Launches Biologichest: A 3D-Printed, Smell-Proof Compost Container Now on Kickstarter

Now live on Kickstarter, the Biologichest offers a practical, odor-free solution for managing kitchen food waste while fitting seamlessly into modern interiors.

Biologichest is equipped with a magnetic seal and TPU gasket to block odors, an integrated fruit fly trap system, and a modular inner bucket for easy cleaning and compost handling. Unlike traditional compost bins, it's designed to stay on the countertop offering functionality and form in one eco-conscious product.

"We designed Biologichest for people who care about their kitchen as much as they care about the planet," said Mario Alejandro Alzate, founder of MATRO Suisse Design. "It's sustainability that works and looks good doing it."

The project is being manufactured using local 3D-printing methods in Switzerland, reducing waste and minimizing environmental impact. The Kickstarter campaign, which launched earlier this month, has already drawn support from backers across Europe and continues to gain attention among environmentally minded households.

With \$778 pledged toward a \$21,073 goal and 19 days remaining in the campaign, MATRO Suisse Design is offering early-bird pricing, bundle packages, and exclusive backer-only color options.

About MATRO Suisse Design

Based in Savosa, Switzerland, MATRO Suisse Design develops innovative, sustainable products that enhance daily life through thoughtful design and functionality. Focused on reducing waste and supporting conscious living, the company combines engineering with eco-friendly practices to create smart, modern home solutions.
