

Forged Steel Fittings and Flanges Built to Perform

Greatest Forged Fittings Manufacturer in India As Per ASME B16 11, Supply Socket Weld and Threaded Pipe Fittings Stock like Elbow, Tee, Cap etc. in Custom Sizes At Cost Effective Prices in Mumbai

Mumbai, Maharashtra Jul 3, 2025 ([Issuewire.com](https://www.issuewire.com)) - Triton Metal and Alloys is a leading brand in the steel industry. We offer high-quality cast metal fittings that meet global standards. These fittings are often used in high-pressure pipe constructs within the oil, petrochemical, and energy producing fields. Our strong metal fittings are known for their lifespan in hard settings and resistance to corrosion.

Outstanding Stainless Steel Forged Fittings for Industrial Uses

We provide a large selection of solid stainless steel fittings that are made for high tensile energy and have excellent corrosion resistance. These fittings are perfect for industries that need very clean conditions, like prescription medicine and food processing. We test our fittings carefully to make sure they perform well under demanding situations. We provide specialized solutions that carefully meet consumer needs, with a wide range of grades and sizes.

India's Top Manufacturers of Forged Flanges

Triton Metal and Alloys, a leading producer of solid flanges, produces high-performance additives used to securely join pumps, pipelines, valves, and other equipment. Forged flanges are ideal for touchy programs due to the fact that they provide more energy and higher mechanical properties than solid flanges. Our advanced forging strategies ensure that certain dimensions are more suitable for sturdiness. Customers rely on us for fast transportation, satisfaction, and consistency both in India and internationally.

Reliable SS Flange Producers in India

We provide stainless steel flanges that function very well in corrosive and hot conditions, making us one of the most reputable [SS Flange Manufacturers in India](#). We offer a range of face types and pressure classifications for our stainless steel flanges. Triton Metal & Alloys is your go-to supplier for premium stainless steel flanges at affordable costs, regardless of your demand for conventional or bespoke solutions.

Flanges manufactured from stainless-steel 304 to prevent corrosion.

We offer 304 stainless steel flanges, known for their outstanding resistance to corrosion and oxidation. These flanges are best for packages involving mild to extreme temperatures within the meals, chemical, and marine sectors. Due to its weldability and sturdiness, the 304 grade is a desired option for many exceptional fields. The specific engineering of our SS 304 flanges guarantees secure and leak-evidence connections.

Sturdy 316 stainless steel flanges for harsh conditions

Our stainless-steel 316 flanges provide improved corrosion resistance for harsher conditions, especially when exposed to acidic and chloride-containing solutions. Molybdenum is added to SS 316 to grow its power and pit resistance. Chemical processing, medicines, and maritime engineering all regularly appoint those flanges. To guarantee utmost dependability, we produce these flanges in compliance with

international quality standards.

Duplex Flanges for Sturdiness and Resistance to Corrosion

Duplex Flanges from Triton Metal & Alloys combine the advantages of ferritic and austenitic stainless steels. In situations high in chloride, these flanges provide exceptional corrosion resistance, fatigue resistance, and mechanical strength. Heat exchangers, pressure vessels, and offshore oil drilling all make extensive use of them. Our duplex flanges come in a variety of diameters and pressure ratings and satisfy industry standards.

Flanges Made of Inconel 625 for Tough Environments

For high-temperature, excessive-strain settings like chemical plants, nuclear reactors, and airplanes, our Inconel 625 Flanges are perfect. Excellent resistance to pitting, oxidation, and crevice corrosion is furnished through Inconel 625. Even below intense heat conditions, those flanges hold up nicely. Triton Metal & Alloys uses quality-tested materials and precision machining to ensure performance while manufacturing Inconel flanges.

Hastelloy C276 Flanges for Environments with Aggressive Chemicals

Hastelloy C276 Flanges from Triton Metal and Alloys are best for harsh commercial settings with amazing oxidizing and lowering chemical substances. [Hastelloy C276](#) is famed for its great resistance to corrosion in waste remedy, chemical processing, and maritime settings. Under high pressures and temperatures, those flanges offer terrific strength and weldability. We guarantee that each Hastelloy flange we provide satisfies exacting quality requirements.

Triton Metal and Alloys gives top-class forged metallic flanges and fittings that fulfill worldwide requirements. We guarantee electricity, durability, and accuracy for any utility with our tremendous selection of stainless steel, duplex, Inconel, and Hastelloy picks. You can depend on us for dependable, excessive-performing answers that are customized to satisfy your business demands.
