

GRC Kompas Launches NIS2 Quickscan to Help MSPs Comply with EU Cybersecurity Law Before Deadline

The Dutch GRC consultancy introduces a practical, fixed-price assessment for IT service providers impacted by the upcoming EU NIS2 directive.

Arnhem, Gelderland Jul 7, 2025 ([IssueWire.com](https://www.issuewire.com)) - GRC Kompas, a cybersecurity and compliance consultancy based in the Netherlands, announces the launch of its NIS2 Quickscan — a streamlined service designed to help MSPs and IT service providers quickly assess their compliance status with the upcoming EU NIS2 directive.

The NIS2 Quickscan includes a free intake, structured assessment of core NIS2 obligations (risk management, incident response, policy documentation, and oversight), and a visual PDF report with a compliance scorecard and actionable next steps.

This quick and affordable approach helps smaller IT providers who lack a CISO or formal GRC program demonstrate accountability and prepare for regulatory enforcement under the Cyberbeveiligingswet, the Dutch implementation of NIS2.

"Our goal is to make NIS2 compliance achievable for every service provider, regardless of size or budget," says GRC Consultant and founder of GRC Kompas. "We translate complexity into clarity — fast."

The Quickscan is delivered within 5 business days and is aligned with ISO 27001 and the NIS2 control framework. It is available for a reasonable price and can be booked directly via the company's website.
