

How RADAR Is Reinventing AI Governance Scores for M&A and Policy Transparency

Helping acquirers, regulators, and researchers assess AI governance risks with measurable insights

AI GOVERNANCE SCORING BUILT FOR M&A AND POLICY

 **RADAR**

New York City, New York Jul 31, 2025 ([IssueWire.com](https://www.issuewire.com)) - RADAR Governance, a policy-tech initiative based in New York, has launched a new AI governance scoring framework designed to help acquirers, regulators, and institutional stakeholders detect governance risk in real-time. The model, named RADAR, evaluates companies' readiness for AI governance by combining internal capacity signals (ORBIT) with external behavior indicators (ECHO).

As AI adoption accelerates across industries, due diligence and regulatory compliance become increasingly difficult to verify through surface-level disclosures. RADAR addresses this gap by offering a transparent, scalable scoring system to assess institutional governance integrity. Inspired by ESG ratings and credit scoring models, RADAR makes it possible to benchmark firms' readiness for AI-related obligations, risks, and ethical deployment.

"Our goal is to help decision-makers see past the press releases and into the systems that actually shape AI behavior," said Wenwen Jiang, Organizer of RADAR Governance and a former strategist on the Steve Cohen-Mets acquisition and the White House pandemic response.

RADAR is currently collaborating with legal advisors, M&A practitioners, and academic researchers to pilot the framework across deal due diligence and public governance scoring. The team is also exploring integration with regulatory sandboxes, government grant filters, and AI risk disclosure guidelines.
