

Jordanian iOS Developer Launches Innovative AR App Transforming 3D Dance Entertainment

Ahmad Mustafa, a Jordanian iOS developer, has launched an innovative augmented reality (AR) app called Hip Hop Babies, redefining mobile 3D interaction and user creativity.

Amman, Jordan Jul 10, 2025 ([Issuewire.com](https://www.issuewire.com)) - Ahmad Mustafa, a Jordanian iOS developer and graduate student in Business Analytics, has launched a pioneering augmented reality (AR) mobile application that is reshaping how users engage with 3D content and entertainment.

Ahmad's latest project, Hip Hop Babies: AR Dance 3D, available on the Apple App Store, allows users to place lifelike 3D dance characters into real-world environments using their iPhone or iPad. The app stands out in the AR space with features like multi-character placement, real-time recording while interacting with virtual models, voice control, and support for over 12 languages, making it highly accessible across cultures.

Driven by a passion for blending technology with creativity, Ahmad developed the app independently. The app includes unique technical elements such as the ability to duplicate or remove AR characters with a tap, record high-resolution videos while rotating and moving models, and capture photos even during recording, all tailored for user engagement and simplicity.

Since its release, Hip Hop Babies has drawn attention for its family-friendly experience and polished AR features, positioning it as one of the few applications offering such a seamless and interactive 3D entertainment experience on mobile.

Ahmad's work reflects deep technical expertise in Apple's ARKit and SwiftUI frameworks, and a commitment to building tools that simplify and elevate digital interaction for users worldwide. With the increasing role of AR in education, gaming, and entertainment, Ahmad aims to continue creating innovative applications that enhance how people connect with technology.
