

LORGAR Gaming Mouse Lineup: Performance and Personalization for Every Gamer

Пресс-релиз_мышки

Limassol, Cyprus Jul 11, 2025 ([Issuewire.com](https://www.issuewire.com)) - Whether you're chasing milliseconds in a competitive match or seeking the perfect balance of control and comfort, LORGAR has a gaming mouse to match your style. From flagship wireless innovations to ultra-light essentials, the company lineup delivers the tools serious gamers need, built around world-class sensors, cutting-edge polling rates, and deep customization via the LORGAR PLATFORM.

LORGAR MSE90W: Flagship Ultralight Gaming Mouse with Pro-Grade Wireless Performance

The **LORGAR MSE90W** sets a new standard for competitive gaming gear, combining a premium magnesium alloy shell with a featherlight 60 g build. Designed for precision and endurance, its symmetrical shape delivers lasting comfort without sacrificing structural integrity.

Equipped with the flagship PixArt 3395 sensor, the MSE90W offers up to 26,000 DPI, 50 g acceleration, and 650 IPS tracking, ensuring pixel-perfect accuracy across any surface.

Take your performance wireless with a 4,000 Hz polling rate and 0.25 ms response time in 2.4 GHz

mode — four times faster than standard gaming mice. With up to 500 hours of battery life and fast charging (80% in 30 minutes), the MSE90W keeps you in the game longer. This model offers color options in black, white, and gunmetal grey.

Advanced customization is unlocked via the LORGAR PLATFORM, where you can adjust performance settings, sync with other LORGAR™ gear, track in-game stats, and create personalized presets with automatic game detection.

Built for pros and perfectionists alike, the MSE90W also includes six programmable buttons, Virgin PTFE feet for ultra-smooth glide, and versatile connectivity via Bluetooth 5.1, USB-C, and 2.4 GHz.

Bonus in every box: extra PTFE feet, cleaning brush, screwdriver keychain, two hand warmers, branded keychain, and a LORGAR cup coaster.

LORGAR MSP80: Precision Meets Personalization with Flagship 8K Performance

The **LORGAR MSP80** is a professional-grade wired gaming mouse designed for total control and deep customization. Built for competitive play, it features 8 programmable buttons, a customizable RGB display, and a striking RGB lighting zone — all wrapped in an ergonomic body available in black or white.

At its core is the flagship PixArt PAW3395 sensor, offering up to 26,000 DPI, 50 g acceleration, and 650 IPS tracking speed for pixel-perfect precision on any surface. The breakthrough 8,000 Hz polling rate delivers a 0.125 ms response time, making every click and movement nearly instantaneous — eight times faster than standard gaming mice.

The 1.8 m braided cable, combined with 100% PTFE skates, ensures smooth, consistent movement in even the most intense sessions.

Unlock advanced features with the LORGAR PLATFORM — program macros, manage profiles with automatic game detection, sync with other LORGAR™ devices, and track real-time performance metrics, including game-specific stats like win rates in CS2 and Dota 2.

The built-in RGB display adds a personal touch: monitor real-time DPI, upload custom images or GIFs, and show off your style at a glance.

Bonus in every box: spare PTFE feet, an eco-friendly LORGAR coaster, two hand warmers, and a branded keychain.

LORGAR MSA10W vs. MSA10: Wireless Evolution or Classic Lightweight Control?

The **LORGAR MSA10** and **MSA10W** may look similar at first glance, but under the hood, they serve different needs — one focuses on pure lightweight performance, the other adds wireless versatility to the mix.

Both the MSA10 and MSA10W offer lightweight, symmetrical designs with the same high-precision PixArt PAW3311 sensor (up to 12,000 DPI, 35 G acceleration) and smooth 100% PTFE gliders. Also, both models are available in black and white designs. But the real difference lies in connectivity and flexibility:

- MSA10 is a wired-only mouse, weighing just 55 g — perfect for gamers who want ultra-light performance with zero battery concerns.
- MSA10W adds triple-mode wireless (2.4 GHz, Bluetooth 5.3, and USB-C) and a 400 mAh battery offering up to 140 hours of playtime. It's slightly heavier at 65 g, but delivers total cable-free freedom.

Both support full customization and performance tracking via LORGAR PLATFORM, but the MSA10W includes a dedicated wireless switch and an extra programmable button.

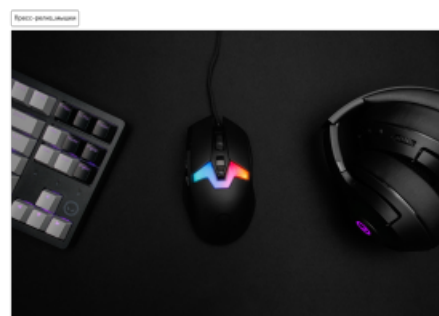

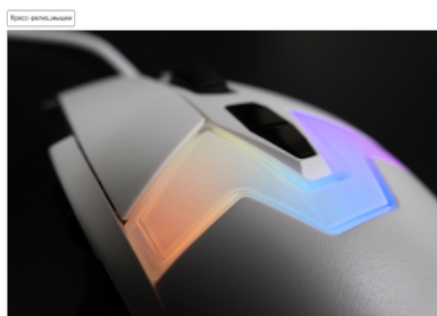

Lighting is another shared strength — both models offer adjustable RGB that can be synced with other LORGAR™ gear. Whether wired or wireless, your setup stays bold and coordinated.

Choose the MSA10 for ultra-light wired gaming, or go with the MSA10W if you want the same performance with the added freedom of wireless play.

Bonus in every box: Spare PTFE feet, eco-friendly LORGAR coaster, two hand warmers, branded keychain.

Ready to find your perfect mouse? Or maybe upgrade the rest of your setup?

LORGAR™ has you covered — from gaming mice and keyboards to headsets, controllers, webcams, microphones, mouse pads, and even sim racing gear. All fully customizable through the LORGAR PLATFORM.
