

Mango AI's Talking Avatar Maker Turns Photos into Speaking Characters

Mango AI introduces a user-friendly talking avatar maker that converts static images into dynamic, lifelike speaking avatar videos. With no specialized knowledge required, users can create engaging videos easily and quickly.

Hong Kong, Hong Kong S.A.R. Jul 16, 2025 ([Issuewire.com](https://www.issuewire.com)) - Mango AI, a powerful video generation tool developed by Mango Animate, has launched an innovative [talking avatar](#) maker. This new feature allows users to transform static images into expressive, animated characters. With just a photo and a text script, users can create speaking avatars that look and sound lifelike, without needing animation skills.

Creating a talking avatar with Mango AI is simple and intuitive. Users start by uploading a portrait image — this can be a real person, a cartoon, or even a pet. Next, they can enter a script, upload an audio file, or record audio directly. Mango AI then animates the image, syncing mouth movements with the text or audio input to generate realistic talking avatar videos in minutes.

When users choose to input text, Mango AI offers an extensive library of AI-generated voices, empowering them to select tones and accents that match their brand or message. The tool also supports multiple languages, making it a useful option for users targeting global audiences.

The talking avatar maker unlocks creative potential across a variety of fields. For example, a language teacher can design a human-like avatar that narrates a history lesson entirely in Spanish, making learning more relatable and fun. A marketer, on the other hand, might use a customized avatar to

introduce a new product in multiple languages like English, French, or Chinese, instantly connecting with audiences worldwide.

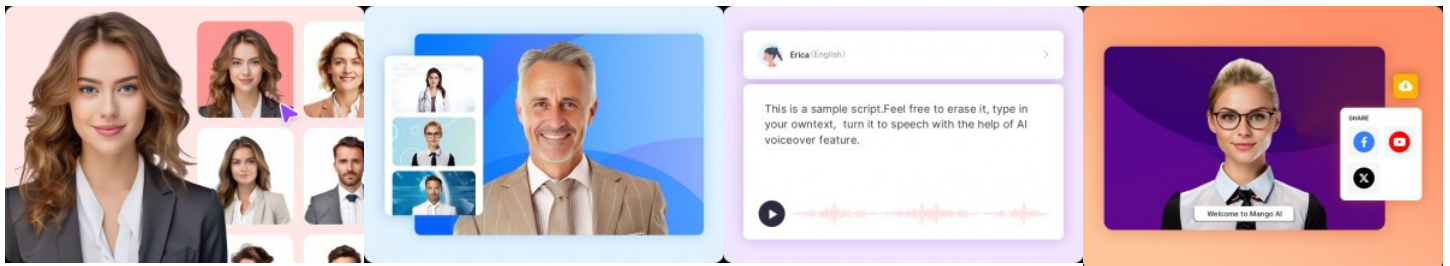

Meanwhile, social media creators are able to breathe life into their profile pictures, turning them into expressive talking characters. These talking avatars can deliver daily updates, messages, or trending content, keeping followers entertained and engaged. Whether it's for social posts, virtual guides, explainer videos, or digital campaigns, Mango AI's talking avatar maker offers a quick and easy way to deliver professional-looking results.

"The talking avatar maker is accessible for users of all levels. It helps them create personalized animated characters with realistic facial expressions and movements," said Winston Zhang, CEO of Mango Animate.
