

New Anglia University Expands Clinical Rotation Network Through Ten New NHS Partnerships

New Anglia University (NAU) has announced a significant expansion to its UK Clinical Rotation Network by partnering with 10 additional NHS hospitals.

London, United Kingdom Jul 10, 2025 ([Issuewire.com](https://www.issuewire.com)) - This initiative provides NAU medical students with enhanced opportunities for real-world clinical training across a broad range of NHS facilities in London, Shropshire, and the West Midlands. The Newly Partnered NHS Hospitals are institutions that are recognised among the UK's leading hospitals for clinical excellence, patient care, and specialist training, making them ideal environments for future physicians to develop the skills and confidence required in modern healthcare. The new partners are:

- Newham Centre for Mental Health, London
- Tower Hamlets Centre for Mental Health, London
- City & Hackney Centre for Mental Health, London
- The Redwoods Centre, Shrewsbury
- Bushey Fields Hospital, Dudley
- Bloxwich Hospital, Walsall
- Dorothy Pattison Hospital, Walsall
- Edward Street Hospital, West Bromwich
- Hallam Street Hospital, West Bromwich
- Penn Hospital, Wolverhampton

These partnerships offer greater access to UK-based clinical placements, reduce waiting times, and broaden the clinical exposure available to NAU students. Rotations are tailored to reflect NHS systems and standards, enabling students to build relevant experience and develop professional readiness for UK-based careers.

Provost of New Anglia University, *Prof. Oleg Kvividze, MD, PhD, said, "This expansion reinforces New Anglia University's commitment to forward-thinking medical education. We're providing our students with real-world NHS exposure, while building partnerships that address both local health needs and global talent shortages."*

A New Pathway for Medicine

For decades, aspiring doctors in the UK have faced a lengthy, expensive, and high-pressure path to becoming a doctor. At top UK medical schools, becoming a doctor typically takes 8 to 14 years, with tuition and accommodation costs approaching £200,000. With rising tuition fees, GP shortages, and student burnout, many are now looking beyond traditional routes.

New Anglia University, located in Anguilla in the Caribbean, offers an innovative, fast-track MD program that's rapidly becoming a compelling alternative. Students spend just 20 months on campus, followed by UK-based clinical rotations after two years, offering a streamlined and affordable option for a new generation of medical professionals.

"In Anguilla, we're not just accelerating medical education, we're redesigning it to focus on wellness, relevance, and real-world experience. Our model empowers students through its alignment with the UK Foundation Programme and postgraduate pathways, as well as mentorship and references from practising NHS physicians. It offers students a new pathway to NHS rotations with a clearer, faster way to achieve their license."

This expansion is the latest step in NAU's mission to provide high-quality, internationally aligned medical training while addressing workforce shortages and reshaping the preparation of future doctors.

New Anglia University (NAU), based in Anguilla, is reshaping the future of medical education with its high-quality MD program. Designed for academic excellence and real-world impact, NAU's curriculum integrates rigorous medical training with hands-on clinical experience at top-tier hospitals worldwide.

Through exclusive partnerships with leading healthcare institutions in the UK and the United States, NAU students gain valuable international clinical exposure. The university attracts a diverse student body from across the globe, particularly from the UK and the US, and delivers focused, world-class medical education in an inspiring Caribbean setting.

At the heart of NAU is its School of Medicine, a research and innovation hub led by an experienced faculty from Anguilla, the UK, the US, and Canada. This collaborative academic environment is rooted in ethical practice, student success, and continuous advancement in healthcare education.

NAU's modern Anguilla campus features advanced learning technologies and collaborative spaces designed to foster clinical excellence and leadership in global health.

Accreditation

New Anglia University's MD program meets the highest international standards for medical education. It is listed in the World Directory of Medical Schools (WDOMS) and officially recognised by FAIMER (School ID: F0008660), with valid ECFMG and Canadian sponsor notes. The university also aligns with the World Federation for Medical Education (WFME) requirements.

As a member of the UK's Quality Assurance Agency for Higher Education (QAA), UK and the International Association for Health Professions Education (AMEE), UK, NAU is committed to supporting global health education and maintaining world-class academic standards.
