

PriusMED and Athena GTX Announce Strategic Partnership

New Athena WVSM Pro monitor integrates with medCLOUD

Rolling Meadows, Illinois Jul 9, 2025 ([Issuewire.com](https://www.issuewire.com)) - PriusMED and Athena GTX are excited to announce a new strategic partnership with PriusMED as a Value-Added Reseller of the recently FDA-approved WVSM Pro vital signs monitor. The WVSM Pro sources real-time 12-Lead ECG waveforms that are relayed by the new medBRIDGE wearable to medCLOUD for broadcast, annotation, and recording to enable advanced remote assistance, case review, and automatic transfer to supported EPCRs.

WVSM Pro is the most modern, lightweight, and innovative monitor that sources 5- or 12-lead ECG waveforms and automatically monitors NIBP, Heart Rate, Rainbow Plethysmography, Mainstream and Sidestream capnography as well as 2 channels of temperature. All these parameters and waveforms are synchronized by medCLOUD with patient-side Audio & Video and broadcast as part of an interactive teleassistance session to the remote care team, the emergency room, and/or other invited clinical specialists located anywhere in the world.

By combining the smallest and most affordable ALS / BLS vital signs monitor with the fastest and the most reliable streaming technology, the Emergency Medicine, Hospital-at-Home, Urban Search & Rescue, Community Paramedicine, Mobile Integrated Health, and the Military Medical Markets - to

name just a few - are standing to receive a powerful boost in productivity, usability, and interactivity.

Mark Darrah, CEO of Athena GTX: "These two solutions complement each other wonderfully; we are seeing a new, better version of teleassistance - no longer on the horizon, but here now. Our WVSM Pro device, as the source for 12-lead ECG streaming of patient vitals, is well on its way to set the new standard of care."

"We love the WVSM Pro for its ease of use and handling of tough situations. By connecting this innovative new monitor to our medCLOUD platform, where we synchronize these vitals with Audio and Video for as many clinical participants as a patient case requires, we can offer a compelling solution to anyone in the healthcare industry," added Michael Jahns, CEO of PriusMED.

In addition to its robust streaming capabilities, medCLOUD incorporates features such as **interactive clinical annotations, high-resolution ECG snapshots, and multiple analyses stored directly on the recording timeline.**

Targeting emergency medical professionals, hospital-at-home services, community paramedicine, and mobile integrated health teams, PriusMED and Athena GTX invite stakeholders in the healthcare sector to explore the advantages of these cutting-edge solutions. With the increasing demand for efficient clinical teleassistance, this collaboration is poised to elevate patient care and enhance operational effectiveness in most critical care situations.

More information on capabilities and advantages of these products is available on the respective websites www.athenagtx.com and www.priusmed.com.

About WVSM Pro

The WVSM Pro (Wireless Vital Signs Monitor) has a new, larger and touch-enabled display, Advanced Life Support capabilities, and added sensing to produce the first ever full Advanced Life Support (ALS) variant of the original Basic Life Support (BLS) monitor while retaining its form factor, size and weight. WVSM Pro's platform allows users to buy a fully enabled ALS monitor or tailor the features they want most. It's a smart system that knows what sensors are connected and adjusts its monitoring accordingly.

About medCLOUD

MedCLOUD is a patented real-time clinical collaboration platform used to stream, broadcast, and record synchronized patient-side audio, video, and vitals (parameters, trends & waveforms) sourced from a monitoring device to enable interactive multi-participant clinical assistance of a first responder with multi-sourced annotations and subsequent review of recorded cases. Available as fully integrated within the customers' current ePCR solution or as a standalone system, medCLOUD projects a Virtual Emergency RoomSM experience that establishes a completely new class of productivity, interactivity, and usability.
