ProDentim is one such chewable oral support formula designed to offer a refreshing approach to oral well-being.

What Is ProDentim?

[ProDentim](#) is a chewable supplement that combines probiotics, plant extracts, and minerals to support daily oral care routines. Developed in GMP-certified facilities in the United States, the product is intended for adult use and formulated without stimulants, GMOs, or synthetic additives.

The tablet format makes it easy to incorporate into a morning routine. Users typically let the tablet dissolve in their mouth after brushing, allowing the ingredients to interact with the oral environment directly.

Key Ingredients

ProDentim includes a selection of ingredients known for their use in wellness and hygiene products:

- **Lactobacillus Paracasei** – A probiotic strain commonly used in oral health research.
- **B.Lactis BL-04** – Known for its presence in gut and immune support formulations.
- **Lactobacillus Reuteri** – Frequently explored in studies on microbial balance.
- **Inulin** – A prebiotic derived from chicory root.
- **Malic Acid** – A naturally occurring compound found in fruits.
- **Tricalcium Phosphate** – Used in oral care for mineral support.
- **Peppermint** – Added for flavor and natural freshness.

Each of these components is selected for its compatibility with overall oral wellness and comfort.
