

RealEdge Labs Launches Landverse AI: The First AI Platform Built for Land Broker Marketing, Prospecting & Deal Flow

Fort Lauderdale, Florida Jul 27, 2025 ([Issuewire.com](https://www.issuewire.com)) - RealEdge Labs, the Florida-based tech innovation company that introduced the first publicly available GPT tools for commercial real estate professionals, today announced the release of **Landverse AI**—an unprecedented AI platform built specifically for land brokers.

Developed with direct input from professionals working in rural and underserved markets, Landverse AI addresses a long-standing industry gap: the lack of scalable, accessible solutions for marketing, prospecting, pricing, and lead generation in land transactions. Landverse AI is expected to level the playing field for brokers across geographies, especially those without access to in-house analysts or dedicated tech support.

“For too long, land brokers—especially those in rural markets—have had to piece together scattered tools and data sources just to stay competitive,” said **Ross Jones**, Co-Founder and Chief AI Officer of RealEdge Labs. *“Landverse AI was built in collaboration with real land professionals who know the grind of sourcing deals, building rapport, and moving dirt. It’s not just smart tech—it’s tech that helps them scale how they do business, find clients, and gain a competitive edge.”*

An Industry First Platform for Land Brokers

Landverse AI delivers a full suite of seven AI tools that support land professionals in the core functions of their business—from land comp analysis and visual marketing to owner outreach, lead generation, and due diligence.

These tools are purpose-built for the land niche, transforming hours of manual research and content creation into minutes of intelligent, field-ready output.

From CRE to Land: Building AI That Streamlines and Accelerates Professional Workflows

Landverse AI follows the success of **CRE Marketing Hub** —RealEdge Labs' first vertical platform and the first suite of commercial real estate GPTs ever made publicly available. Found at [CommercialRealEstateMarketing.com](https://www.CommercialRealEstateMarketing.com), that system supports CRE agents with listing generators, OM builders, video scripts, and prospecting campaigns tailored to commercial workflows.

With Landverse AI, RealEdge Labs expands its mission: building vertical-specific AI platforms that don't just automate tasks—but streamline and accelerate how professionals work, win clients, and grow their business.
