

Clometrix Launches First Macro-Aware Crypto Volatility Forecasting Platform

Singapore, Singapore Aug 18, 2025 ([IssueWire.com](https://www.issuewire.com)) - Clometrix today announced the official launch of its platform, the first of its kind to forecast cryptocurrency volatility around 26 major macroeconomic data releases, including CPI, PPI, and Federal Reserve (FOMC) decisions.

Unlike typical charting tools or after-the-fact commentary, Clometrix analyzes minute-level price data for Bitcoin, Ethereum, and 25 leading altcoins across historical macro events, giving traders actionable “playbooks” ahead of key announcements.

“Everyone knows CPI day is volatile, but few can tell you exactly how Bitcoin or Ethereum have historically behaved after similar surprises,” said Randy Png, founder of Clometrix. “We built Clometrix to give traders that clarity — not signals, but quantified scenarios that help them plan with confidence.”

The platform structures its forecasts into event-conditioned distributions, showing median moves, hit rates, and intra-window drawdowns across multiple time horizons (+5m, +15m, +1h, +4h, +12h). With filters for event type, surprise magnitude, and user-selected reference prices, Clometrix offers a new layer of market intelligence designed for volatility-driven traders.

At launch, Clometrix supports 26 macroeconomic data releases, with plans to expand coverage to more U.S. and international reports. The platform also integrates with Stripe for streamlined subscriptions and offers export tools for desk research, trade journals, and team briefings.

Clometrix is now available at <https://www.clometrix.com>.
