

Compass & Decimetry Partner to Expand Causal Intelligence for Gov & Enterprise.

Partnership expands Causal Enterprise Intelligence across U.S. public-sector and large-enterprise clients for faster, accountable decisions with measurable impact

San Francisco, California Feb 4, 2026 ([IssueWire.com](https://www.IssueWire.com)) - Compass Solutions, a leading IT services provider, and Decimetry Sciences, a pioneer in causal reasoning, today announced a long-term strategic partnership to deliver next-generation enterprise intelligence to U.S. Government and enterprise clients.

The collaboration combines Compass Solutions' business development and professional services capabilities with Decimetry's breakthrough technology in causal modeling. Designed to reveal the underlying drivers of performance, **Causal Enterprise Intelligence** empowers organizations to make proactive, high-confidence decisions in finance, healthcare, transportation, and government services. Compass will lead client outreach and solution deployment, drawing on its extensive network and decades of experience delivering mission-critical IT solutions.

Unlike traditional analytics tools that rely on surface-level correlation, Decimetry's technology integrates causal inference, multidimensional data processing, predictive analysis, and novel mathematical models to deliver adaptive, human-level decision support, even when data is limited or mostly nonexistent. The result is a platform that guides action, not just reflection, and goes beyond conventional machine learning and AI.

"This partnership positions us at the leading edge of enterprise intelligence," said **Anthony Onyewuchi**, Managing Principal and Founder of Compass Solutions. "Our clients are under pressure to act fast, navigate risk, and deliver results. Decimetry's technology doesn't just interpret the past—it predicts what's coming and reveals the true drivers behind outcomes. That clarity gives leaders the confidence to act decisively, even in uncertain conditions."

"Partnering with Compass Solutions advances our mission to put causal intelligence at the center of enterprise decisions, and to elevate AI from rote commentary to defensible explanations and practical levers that change outcomes," said **Simon Dunlop**, Co-founder and Chief Revenue Officer at Decimetry Sciences. "Compass's trusted relationships across highly regulated, high-stakes sectors are a perfect match for our technology."
