

Global Supply Chain Intelligence Market Ready for Global Trade Disruption with AI Solutions by TradeInt™

TradeInt's AI trade solutions kick in to tackle global supply chain disruptions, reshaping trade visibility and driving smarter decisions worldwide.

Singapore, Singapore Aug 20, 2025 ([IssueWire.com](https://www.issuewire.com)) - Supply chain teams are constrained by basics that should be easy but aren't: verifying counterparties, proving who trades what, and confirming they can deliver; finding real market demand beyond outdated reports; and seeing competitors' sourcing, pricing, and route shifts in time to respond. Fragmented trade datasets, lagging customs releases, and broker silos turn partner vetting, market entry, and pricing into guesswork, raising fraud risk, elongating sales cycles, and causing costly misfires in market expansion.

To bridge this widening gap, [TradeInt™](https://www.issuewire.com), as a leading trade intelligence platform, upholds a clear mission: to bring transparent and actionable trade insights to businesses of all sizes worldwide. Headquartered in Singapore, their vision is to empower companies with the data they need to navigate the complexities of the global supply chain, fostering a more connected and efficient trading ecosystem.

TradeInt™ presents a massive database of over [8 billion global trade records](#) and is still growing, covering more than [200 countries](#). Users can access AI-powered global trade analytics, market insights, and up to [400M company profiles](#) with verified contact databases, leveraging an in-built globalised system [library of harmonised code](#) that makes searching intuitive, regardless of their location. The smart search feature, complete with powerful filters, ensures users can quickly find the exact information they need.

In its commitment to innovation, TradeInt™ recognizes the growing importance of AI (artificial intelligence) in the industry. They are currently developing an **AI-driven data search and crawl**

function. This upcoming feature will allow users to uncover complex trade patterns and insights from their extensive database using personalised, text-based queries, moving beyond traditional keyword searches. This is a significant step toward making trade intelligence more accessible and intuitive.

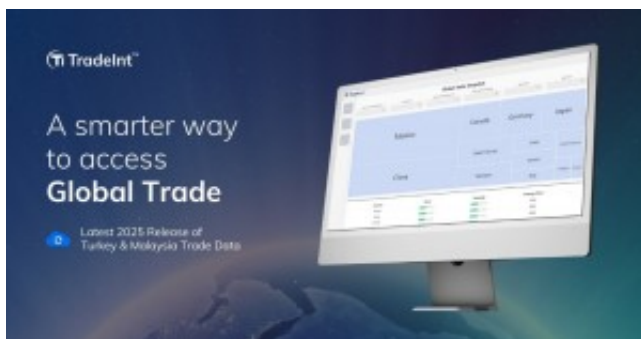

To provide a more comprehensive market view, TradeInt™ is also developing an **AI Live Trade Insight Report**. This tool aims to integrate TradeInt's vast internal database of verified trade records with a continuous stream of real-world, external global news and public datasets crawled online. This synergy of structured and unstructured data will provide a holistic view of the market, allowing businesses to analyze historical trade movements in the context of current events, geopolitical shifts, and breaking news.

"Our long-term mission at TradeInt™ is to serve as the definitive source of truth for global trade professionals," said Eric, the Chief Executive Officer. "By continuously pushing the boundaries of what's possible with AI, we are building a foundation of foresight and transparency that will empower our clients to make smarter, faster decisions and navigate the complexities of global trade with confidence."

This evolution is fundamentally changing how companies approach supply chain management and competitive analysis. Businesses can now gain deep insights into global trade movements, analyze competitors' recent strategies, and identify verified buyers and sellers through extensive company profiles. The era of static data is being replaced by dynamic, intelligent platforms that provide strategic foresight.

About TradeInt™

TradeInt™ is a leading trade intelligence DaaS platform headquartered in Singapore, presenting AI-powered global trade insights based on over 8 billion verified import and export data across more than 200 countries. Trusted by over 5,000 businesses globally since 2018, it empowers trade professionals to make data-backed decisions in the global supply chain, consultancy services, business strategic planning, and more. TradeInt's platform processes and analyzes billions of trade data points using advanced technologies, like graph analytics, NLP, and machine learning, to deliver end-to-end visibility into global supply chains.
