

HeyAma: Redefining Home Elderly Care with Privacy-Protecting AI and Voice Control

Fuzhou, Fujian Aug 17, 2025 ([IssueWire.com](https://www.issuewire.com)) - As the global aging trend accelerates — with the senior population already exceeding 700 million and still growing — more and more families are facing a daunting challenge: how to remotely care for aging parents while preserving their dignity, privacy, and independence.

HeyAma was born at the intersection of this need and emerging technology. It's not just a monitoring tool — it's an empowering intelligent elderly care system. By integrating fall detection, health management, and daily companionship into one solution, and delivering it through an age-friendly smart tablet, HeyAma offers tangible, visible companionship for seniors and peace of mind for their families through reliable remote guardianship.

Privacy First, Safety Without Compromise

Unlike traditional home cameras, HeyAma uses a **privacy-protecting human pose monitoring system**. This system processes data via edge AI, recognizing posture and movement through geometric skeleton models to detect falls.

For families increasingly concerned about home privacy, HeyAma delivers a trustworthy solution — ensuring safety while respecting personal space.

Voice Interaction Designed for Seniors — Bringing Daily Life to Life

Technology can often feel intimidating for seniors, but HeyAma makes it approachable. Through its built-in voice control system, users can complete tasks simply by speaking, such as:

- Calling family members
- Setting reminders
- Opening health reports, YouTube, or digital photo albums
- Adjusting volume or screen brightness

No complicated menus, no steep learning curve — just say the command, and HeyAma responds. This simple and intuitive interaction is especially valuable for seniors with impaired vision or limited dexterity, giving them a genuine sense of control and independence.

More Than Recording — It's Continuous Care

HeyAma creates a **closed-loop health management system** :

- Fall alarm and one-click alarm
- Vital sign monitoring (heart rate, blood oxygen, sleep) via a smart watch
- Reminders with both voice and pop-up notifications
- Real-time data sync, automatically generating health trends
- Daily, weekly, and monthly health reports pushed directly to the family app

All features are integrated through the smart tablet, ensuring information consistency and enabling rapid, effective responses when it matters most — improving the overall quality of home care.

Emotional Connection Is Part of the Product

HeyAma doesn't just focus on safety and health — it builds emotional bridges between people. The smart tablet acts as a companionship hub, featuring:

- A digital photo album to display family memories
- Voice interaction and AI chat for basic daily conversations
- Audio and video calling to stay connected with loved ones

Technology has never been this warm. HeyAma isn't a cold device — it's a heartfelt member of the household.

World-Class Expertise — A Strong Technical Moat

HeyAma's core algorithms are led by our Chief Scientist, **Professor Josef Kittler**, a Fellow of the Royal Academy of Engineering and a global authority in computer vision. With decades of research in AI and pattern recognition, Prof. Kittler brings a strong scientific foundation to HeyAma's algorithmic systems, ensuring stability, reliability, and long-term competitiveness — building a robust "technical moat" for the brand.

Serving Families and Institutions Alike

HeyAma follows a dual strategy for home and institutional care. For families, it offers a plug-and-play smart tablet with an all-in-one design that is easy to set up and senior-friendly. For senior living communities and care facilities, it can be flexibly configured to meet diverse care needs.

Technology That Cares — and Understands

HeyAma isn't designed to replace family members or caregivers. Its philosophy is to **extend companionship, complement care, and enhance independence**. It reflects a new vision of aging — one where later life is a stage worthy of respect, support, and attentive care.

HeyAma is not about “watching” — it’s about “understanding.”

It's not a cold system, but a warm way of safeguarding.

In an era of rapid population aging, perhaps we all need more of this kind of intelligence.
