

MediSage Launches MyClinic.AI: Asia's First AI-Driven Clinical Operating System to Redefine Healthcare in India

The Clinic Is Now Intelligent! MediSage Pioneers AI-Driven Healthcare with Myclinic.ai.

Mumbai, Maharashtra Aug 25, 2025 ([IssueWire.com](https://www.issuewire.com)) - MediSage, Asia's largest and most influential digital platform for doctors, today announced a groundbreaking strategic move poised to fundamentally redefine healthcare delivery across India with the launch of **Myclinic.ai**. This pioneering platform introduces Asia's first fully integrated clinical management system *powered by Artificial Intelligence (AI)* and a seamlessly embedded *Electronic Medical Record (EMR)*, directly addressing the profound operational burdens that have long limited doctors' capacity to provide optimal patient care.

This is more than an upgrade—it's the new standard for medical practice in India and beyond.

"The reality is that doctors in India are extremely overburdened with work," states **Bhagwat Dhingra, Founder and MD of MediSage**. "We recognized a unique opportunity to give doctors back their most precious commodity: time. Myclinic.ai integrates a suite of AI features that are proven to help doctors reclaim up to 2 hours daily. This isn't just about efficiency; it's about enabling them to either deepen their focus on patient care, leading to better health outcomes, or significantly improve their personal well-being by spending more quality time with their families."

Myclinic.ai is engineered as a seamless, intelligent operating system for clinics, designed to automate complex workflows and consolidate critical patient data into an intuitive, accessible interface. This empowers medical practitioners to navigate their daily responsibilities with unprecedented efficiency. The core of the platform's transformative power lies in its intelligent automation engine. This includes an advanced AI-powered WhatsApp bot that intelligently manages the entire patient journey – from initial appointment scheduling and rescheduling to sending automated reminders and follow-ups – drastically reducing patient no-shows and freeing up valuable human resources.

What does this mean for doctors?

LESS Admin: Our AI bot handles appointments via WhatsApp.

MORE Time: Instant access to patient records, minus the hassle.

SMARTER Care: An AI assistant to support your decisions.

Anurag Dhingra, Co-founder of MediSage, added, "The feedback from our extensive early-adopter program has been overwhelmingly positive. Doctors are reporting significant time savings and a noticeable reduction in administrative stress within the first week of implementation. We didn't just build a suite of features; we meticulously designed workflows that eliminate friction, allowing doctors to be fully present with their patients. The AI assistant, for instance, acts as a dynamic co-pilot, providing rapid access to information and insights, thereby enriching the consultation experience and allowing doctors to truly focus on clinical excellence.

The launch of Myclinic.ai solidifies MediSage's position as a dominant and visionary force in India's burgeoning health-tech sector. It represents a pivotal shift, moving beyond knowledge-sharing to providing mission-critical, intelligent tools that form the digital backbone of modern medical practice, ultimately contributing to a more resilient, efficient, and patient-centric healthcare system for India.

This is the future of healthcare, built to put doctors first.

Welcome to the revolution.
