

Science Writer Ruth Leedy Carr Unveils Groundbreaking Book on Hollow Earth and Imminent Polar Shift

“Tipping Point for a Hollow Earth” Warns of Axis Shift Backed by Asimov, Sagan, and Suppressed Evidence

Maryland City, Maryland Aug 4, 2025 ([Issuewire.com](https://www.Issuewire.com)) - The latest release from science researcher and journalist Ruth Leedy Carr, *Tipping Point for a Hollow Earth: How Asimov and Sagan Backed My Prophecy of a Polar Hole Shift to Europe*, explores what may be the most pressing and yet unspoken global threat of our time: an imminent Earth axis shift and its catastrophic implications for civilization.

In this bold and revelatory work, Carr presents a fusion of prophecy, scientific theory, and decades of investigative research. With striking imagery and provocative claims—such as the existence of a lighted polar hole on Mars lit by an internal sun—Carr challenges the silence of mainstream science and media. She connects the dots between modern space imagery, suppressed evidence, and the prophetic

insights of great scientific minds like Isaac Asimov and Carl Sagan, whom she credits with offering a way forward from the looming threat.

"The public has been lulled into ignorance, and scientists have gone quiet on this," says Carr. "But the signs are undeniable. The polar instability of not only Earth but also Mars must be acknowledged. If we ignore it, we do so at our own peril."

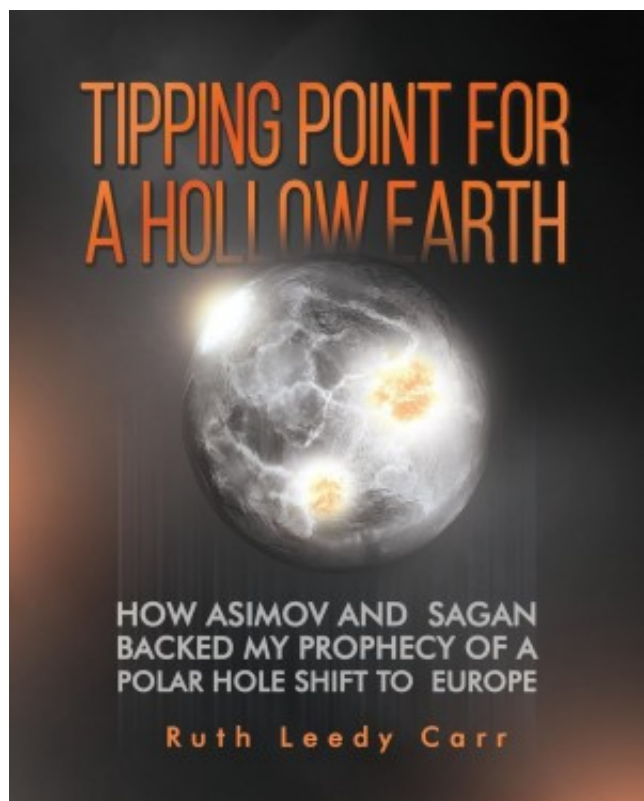

Carr also shines a spotlight on the alleged refusal by NASA to address these anomalies, even when pressed by a U.S. congressman, and condemns the collective silence of global media as a betrayal of public trust.

A longtime researcher of Edgar Cayce's cataclysmic predictions, Carr has been investigating the hollow Earth theory since 1980. Her early works, reissued by Saucerian Press under the late Gray Barker, earned her recognition from top UFO and anomaly researchers, including William L. Moore, who called her "the world's foremost proponent of the hollow Earth theory."

Carr's previous book, *Polar Hole Light in Europe's Clouds*, further explores evidence of hollow planetary structures and unexplained atmospheric phenomena. She now invites readers in the U.S. and U.K.—her primary focus regions—to reexamine accepted Earth science before it's too late.

About the Author: Ruth Leedy Carr studied journalism and psychology at Indiana University, where scientific accuracy and careful reporting became central to her academic foundation. With over four decades of investigative research into fringe science and suppressed knowledge, Carr has become a prominent voice in the discussion surrounding Earth's inner structure and the future of humanity.

Tipping Point for a Hollow Earth is now available on [Amazon](https://www.amazon.com) and other online [retailers](#). For more information, visit www.ruthleedycarr.com.
