will earn you \$0.6

Paris, France Aug 21, 2025 ([Issuewire.com](https://www.issuewire.com)) - Over the past decade, mobile phones have completely transformed people's lives—they serve as wallets, social hubs, video platforms, and work portals. But few have realized that phones can also be remote tools that "make money" for you anytime. Against the backdrop of slowing economic growth and normalized inflation, "making phones not just for spending, but also for generating cash flow" has become a new endeavor that some people are quietly trying. Behind this is the cloud mining model, which was initially popular only among crypto enthusiasts and professional mining farms, and now can be accessed through mobile phones.

DL Mining: A "Cloud Mining" Platform on Your Phone

Traditional mining requires hardware, space, electricity, and ongoing maintenance, with startup costs reaching tens of thousands of yuan. Additionally, there are continuous electricity expenses and equipment depreciation. The high threshold makes it difficult for ordinary people to get involved. Cloud mining centralizes these complex links in remote data centers for hosting: the platform purchases mining machines, integrates energy resources, and takes charge of full-process operation and maintenance. Users only need to rent computing power through their phones or webpages. The background operates non-stop 24/7, and the generated cryptocurrencies are distributed to accounts daily according to the

proportion of computing power. Phones can check, withdraw, or transfer funds at any time, eliminating hardware and technical barriers entirely.

There are many platforms offering cloud mining services on the market, but few can truly operate stably for a long time. DL Mining is a typical representative. Founded in 2014 and headquartered in the UK, this platform focuses on enabling people to easily manage computing power through mobile phones. Currently, it has over 5 million registered users worldwide. Public data shows that its Bitcoin computing power accounts for approximately 3%-4% of the global total.

How to Join [DL Mining](#)? The Process Is Simple and Threshold-Free

The entire participation process requires no complicated steps, making it easy for beginners to get started:

- Register an account: Visit the official DL Mining website and fill in your email address and password to create an account.
- Choose a contract and purchase: Select a computing power package based on your budget. You can choose a cost-effective short-term trial contract or a long-term contract. After payment is completed, the computing power takes effect immediately, and mining starts automatically in the background.
- Daily income automatically settled: Daily earnings are automatically deposited into the account balance. Users can withdraw funds to their personal wallets at any time or choose to reinvest to accumulate more computing power for compound growth.
- Multi-level referral bonuses: Through DL Mining's multi-level referral program, you can earn up to 3% commission by inviting friends and family to join. In addition, you can get an extra 1.5% commission from the earnings of your direct referrals.

Example of Computing Power Contracts: Start Your Passive Income Journey with \$15

DL Mining's computing power contracts are settled daily and support flexible combinations. Here are some public contract examples:

For ordinary users, the most common choice is to start with contracts ranging from \$100 to \$1,000, verify the yield, and then decide whether to increase investment. Large investors can place single orders of hundreds of thousands of dollars through their phones, with passive income exceeding \$7,000 generated automatically every day.

Phones Become "The New Generation of Remote Mining Machines"

Most people still use phones as consumption tools, while some have begun to transform them into "portals for making money for themselves." Essentially, phones are the key entry point for connecting to global computing power—no matter where you are, as long as there is an internet connection, you can remotely access mining farms and generate visible passive income every day. For young people, this may not be a story of getting rich overnight, but it is indeed an additional income channel that adds a sense of security.

Conclusion

Salaries may struggle to keep up with rising prices, but phones can be an additional solution for increasing income. Cloud mining has a low threshold and simple operation, and many people have

verified its feasibility through their phones. Instead of using your phone only as a consumption tool, turn it into a "key" for remote computing power to generate income for yourself. If you want to try, start with DL Mining and let your phone bring you visible passive income.
