Atua AI Expands Modular Frameworks to Power AI-Driven Productivity Tools

Upgraded frameworks deliver greater adaptability, scalability, and reliability for enterprise and developer workflows across Web3 ecosystems.

Singapore, Singapore Sep 26, 2025 (<u>Issuewire.com</u>**)** - Atua AI (TUA), the decentralized AI-powered productivity and automation platform, has announced the expansion of its modular frameworks to provide stronger support for AI-driven productivity tools. This enhancement equips developers and enterprises with flexible infrastructure to accelerate innovation and streamline operations in multichain environments.

The upgraded frameworks introduce improved orchestration logic, enabling AI modules such as Chat, Writer, Coder, and Classifier to integrate seamlessly into decentralized applications. With modular design, developers can deploy and scale components independently, reducing downtime while optimizing system performance. The result is faster, more reliable workflows that adapt dynamically to blockchain conditions.

By expanding its modular frameworks, Atua AI strengthens the foundation for enterprise-grade solutions. Businesses can now implement intelligent workflows that scale securely across chains like Ethereum, BNB Chain, and XRP Ledger, ensuring consistency in mission-critical operations. This milestone underscores Atua AI's commitment to providing adaptive infrastructure that powers the next generation of decentralized productivity tools.

Atua AI offers AI-powered productivity and creativity tools in the Web3 space. Its features include Chat, Writer, Coder, Imagine, Transcriber, Voiceover, Voice Isolator, and Classifier.
