☐	1073059	EXAMPLES 1 and 2).	Empty	Empty	Empty	Empty
☐	1073060	(see Fig 05-1, EXAMPLES 3 and 4).	Empty	Empty	Empty	Empty
☐	1073061	scheduled (see Fig 05-1, EXAMPLE 5).	Empty	Empty	Empty	Empty

Berlin, Germany Sep 19, 2025 (Issuewire.com) - [Awtomated TBMS](#), the Berlin-based provider of AI-powered translation business management solutions, today announced a new integration with **DeepL**, bringing high-quality AI translations directly into its seamless project management workflows.

The integration allows language service providers (LSPs), enterprises, and freelance teams to instantly access DeepL’s advanced AI translation capabilities inside the Awtomated platform. This ensures faster turnaround times, greater consistency, and improved quality for multilingual projects across industries.

"Our mission has always been to simplify and automate the complex workflows of translation businesses," said [Awtomated TBMS](#) CEO Rishi Anand. *"With DeepL integrated into our platform, users can now combine AI-powered translations with human expertise, all within one streamlined system."*

Benefits of the Awtomated + DeepL integration include:

- **Faster Turnaround:** Instant AI-assisted translations embedded in project workflows.
- **Improved Quality:** Leverages DeepL’s neural networks for more natural, context-aware translations.
- **Seamless Automation:** Combines AI with Awtomated’s project, vendor, and client management tools.
- **Scalability:** Supports agencies, enterprises, and freelancers handling high-volume multilingual projects.

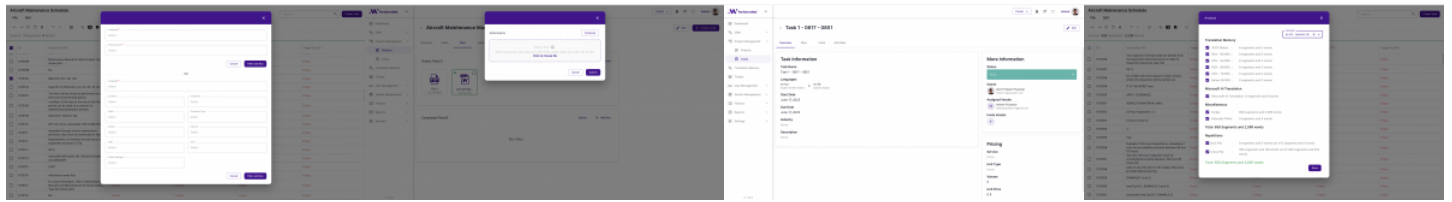

Learn more about the integration [here](#).

About [Awtomated TBMS](#)

[Awtomated TBMS](#) is a Berlin-based Translation Business Management System designed for language service providers, enterprises, and freelance translators. The platform combines project management, vendor/client portals, invoicing, translation memory, and AI integrations in one system. With its mission to simplify and automate complex workflows, Awtomated TBMS empowers users worldwide to deliver high-quality multilingual content faster and more efficiently.
