

Leading Web3 + AI Project SuperImage Secures \$5 Million Investment

Alice, Texas Sep 26, 2025 ([Issuewire.com](https://www.issuewire.com)) - SuperImage, the world's first decentralized AI image generation and editing platform, announced the completion of a \$5 million strategic financing round led by Genesis Block Capital. This funding will further accelerate SuperImage's product upgrades and global expansion, driving wider adoption of decentralized AI image applications.

A Global Leader in Decentralized AI Image Platforms

Founded in June 2023, SuperImage has already attracted over 1 million users. The platform operates on a decentralized GPU network, aggregating idle computing power worldwide. Anyone can contribute their home or professional GPUs to mining and earn \$SIC token rewards.

Compared with centralized AI services, SuperImage reduces image generation costs to just one-tenth, offering creators, designers, and enterprises a low-cost, high-efficiency solution.

Currently, SuperImage supports three major models—Hidream, Flux Dev, and Sana—covering diverse text-to-image needs across various styles and use cases. At the same time, its Telegram-based text-to-image service is live, delivering a more convenient AI creative experience to global users.

Core Advantages

AI-Powered High-Resolution Image Generation

- Uses advanced latent diffusion models to generate realistic or artistic images from text.
- Equipped with Real-ESRGAN technology, enabling up to 16× super-resolution upscaling with sharp and lifelike details.

Decentralization and Ultra-Low Costs

- Open access for GPU miners worldwide, harnessing idle computing power across society.
- Image generation costs are just 10% of centralized platforms.

User Earnings and Ecosystem Incentives

- Supports batch generation for art, photography, and social media content creation.
- Upcoming custom model and LoRA upload features will allow users to share models and earn 30% of \$SIC token revenue.

Strong Deflationary Tokenomics

- **Fuel Payment:** All premium services and API calls require \$SIC.
- **Permanent Burn:** 100% of subscription fees are burned, ensuring deflation.
- **Staking Demand:** Billions of API calls drive massive staking demand, continuously reducing circulating supply.

Future Vision

SuperImage is committed to unlocking the potential of idle GPUs worldwide through decentralized AI, making AI image generation more affordable, open, and inclusive. With multi-model support, decentralized computing, and a unique token mechanism, SuperImage is rapidly becoming a benchmark project in the Web3 + AI space.
