

## Rink Systems Expands Market Presence With Inline Xtreme Pro Dasher Boards

The business emphasizes that the product matches the strength of Legacy Pro aluminum boards at a lower cost, making it suitable for both indoor and outdoor hockey use.

**Albert Lea, Minnesota Sep 11, 2025 ([Issuewire.com](https://www.issuewire.com))** - Rink Systems has introduced the Inline Xtreme Pro dasher boards, a product designed to meet professional performance standards while reducing costs for inline hockey facilities. The system is manufactured to match the strength and durability of the company's Legacy Pro aluminum boards and is suited for both indoor and outdoor

applications.

***The representative of Rink Systems, “The Inline Xtreme Pro delivers the same level of durability and reliability as our top-tier boards, allowing more facilities to access professional-grade equipment.”***

The Inline hockey rink incorporates a hot-dip galvanized tubular steel framework to ensure structural integrity and long service life. This construction method protects against corrosion and minimizes maintenance requirements. Facilities can select either posted clear shielding for visibility or chain link fencing for open-air settings.

The system includes precision-engineered hardware for consistent assembly and operation, along with FRP facing that performs in all weather conditions. The design allows for safe play while maintaining consistent performance over extended use. The product is manufactured in the United States, with all components meeting Rink Systems’ quality control standards.

*The representative of the firm added, “The Inline Xtreme Pro positions operators to improve their rinks without compromising on standards.”*

Rink Systems continues to provide solutions that meet the functional requirements of sports facilities while controlling long-term operational costs. The [Ice rink liner](#) is a direct example of the company’s ability to adapt proven designs to serve a broader market segment.

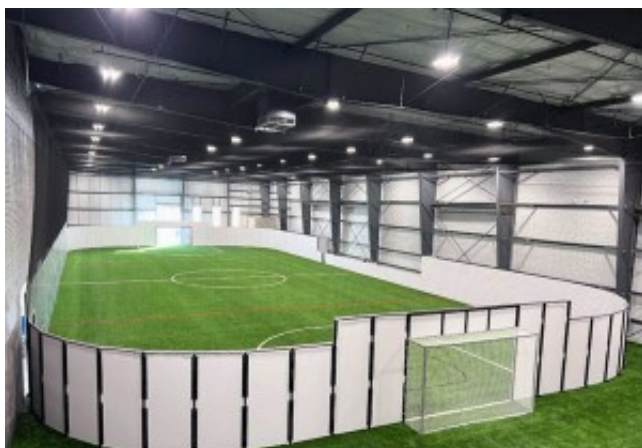

## **About Rink Systems**

Rink Systems designs, manufactures, and supplies rink equipment for ice and inline hockey facilities across North America. The company’s product range includes dasher boards, rink components, maintenance equipment, and accessories. Its operations are based on delivering functional, long-lasting products that meet the demands of competitive play while adhering to manufacturing standards in the United States.
