

Sam Altman's Dream Solved? Punky Tiger Labs Files 52 Patents for the "iPhone Killer" AI Device

Punky Tiger Labs, unveils a patent-protected AI device concept promising 4x–10x the sustained power of an iPhone. The company is now seeking global partners, investors, and manufacturers.

Manhattan, New York Sep 26, 2025 ([Issuewire.com](https://www.Issuewire.com)) - For years, Silicon Valley has been chasing the same obsession: the **AI-era device** that could replace the smartphone. Sam Altman, Jony Ive, Apple, and Google have all hinted at it. But what if the answer has already been invented — not in

Silicon Valley, but by a Latin American inventor in Delaware?

Álvaro Mauricio López, Founder & CEO of **Punky Tiger Labs Inc.**, has filed **52+ patents with the USPTO** covering breakthrough technologies for the next generation of the internet. At the heart of this intellectual property portfolio lies a **confidential AI device concept** that some are already calling an *“iPhone killer.”*

The patented design is engineered for the **native AI era**, not the app era of 2007. It promises **4x to 10x more sustained power than an iPhone**, without throttling, overheating, or the limitations that have defined smartphones for nearly two decades.

A Research & Patents Boutique

Unlike traditional startups, Punky Tiger Labs defines itself as a **research & patents boutique** — a company built to invent, protect, and license the core technologies that will shape the future.

The company’s portfolio already includes innovations in:

- **Phygital trust infrastructure** for anti-counterfeiting and authenticity
- **A new category of digital assets** beyond NFTs
- **Anti-piracy systems** powered by AI and blockchain
- **Next-generation device architectures** designed to anchor the internet of the future

With more than 52 inventions filed, Punky Tiger Labs is creating an **IP fortress** capable of reshaping multiple industries, from consumer electronics to digital trust.

Why It Matters

The smartphone revolutionized the 2000s, but it was never designed for today’s AI-driven world. Mobile devices struggle with performance, overheating, and obsolescence. Meanwhile, consumers face increasing risks of fraud, piracy, and data insecurity.

Punky Tiger Labs believes the solution is a **new category of device** — modular, AI-native, and scalable. This device is not a concept sketch or a dream. It is a **blueprint protected under patents**, waiting for the right partner to bring it into production.

“This is not speculation. It’s a complete, patented architecture. We believe it could be the iPhone moment of the AI era — the only question is: who will make it real?”

— Álvaro Mauricio López, Founder & CEO, Punky Tiger Labs

Call for Partners and Investors

Punky Tiger Labs is currently seeking:

- **Global manufacturers** in semiconductors, displays, and consumer electronics

- **Commercial partners and intermediaries** to license and scale its technologies
- **Investors** who recognize the long-term value of intellectual property

Technical details can be shared under **NDA and formal agreements**.

About Punky Tiger Labs

Punky Tiger Labs Inc. is a **Delaware-based boutique of research and patents**, focused on building the technologies for the **next generation of the internet**. With 52+ inventions filed at the USPTO, the company's work spans digital trust, blockchain, AI-driven authentication, and next-generation device architectures.

By combining visionary invention with strong intellectual property protection, Punky Tiger Labs aims to set the standards that will define the AI-native era.
