

SEC.co Launches Custom SIEM Software for Modern Cybersecurity Operations

The new solution offers purpose-built, real-time security monitoring tailored to enterprise infrastructure, compliance, and scalability demands.

Seattle, Washington Sep 3, 2025 ([IssueWire.com](https://www.issuewire.com)) - [SEC.co](https://www.sec.co), a cybersecurity innovation company focused on enterprise defense infrastructure, today announced the official launch of its [Custom SIEM Software](#) offering. This new service allows organizations to build **bespoke Security Information and Event Management (SIEM)** systems engineered specifically for their network topology, compliance requirements, and incident response needs.

“Security isn’t one-size-fits-all anymore,” said **Nate Nead**, CEO of SEC.co. “Our custom SIEM offering empowers security teams to detect, correlate, and respond to threats in real-time—without being boxed into rigid legacy platforms.”

As cyberattacks grow more sophisticated and regulatory environments become increasingly complex, off-the-shelf SIEM platforms often fall short in terms of flexibility, scalability, and transparency. SEC.co’s custom-built solution gives enterprises full control over **log ingestion, alert logic, data retention policies, and compliance enforcement**, all while maintaining top-tier visibility across hybrid or multi-cloud environments.

“Too many organizations are stuck tuning black-box SIEMs that weren’t built for their architecture or risk profile,” said **Samuel Edwards**, CMO of SEC.co. “We’re giving teams the keys to their own security engine—one that actually fits.”

What Makes It Custom

SEC.co’s Custom SIEM offering delivers full-stack, modular, and extensible tooling tailored to the organization’s exact operational footprint. Core features include:

- **Bespoke Log Ingestion Pipelines**
Collect and normalize logs from any source (cloud services, internal apps, endpoints, OT/ICS devices, etc.)
- **Custom Rule Sets & Alerting**
Correlation logic built specifically for business logic, risk appetite, and attack surface
- **Role-Based Access & Audit Trails**
Built-in compliance controls for SOC 2, ISO 27001, HIPAA, PCI DSS, and more
- **Visualization Dashboards**
Custom dashboards for SOC analysts, CISOs, and compliance teams—with Grafana, Kibana, or proprietary UI integration
- **Deployment Flexibility**
Available as **air-gapped on-premise, private cloud, or hybrid** installations with full source code transparency

“Our clients need visibility and control without sacrificing speed or scale,” said **Eric Lamanna**, VP of Business Development at SEC.co. “By delivering custom SIEMs, we help them streamline threat detection while meeting their compliance requirements to the letter.”

Who It's Built For

The SEC.co Custom SIEM solution is ideal for:

- **Enterprises in regulated industries** (finance, healthcare, energy, defense)
- **Organizations with complex hybrid/cloud environments**
- **Security teams seeking vendor independence or open-source flexibility**
- **MSSPs** looking to offer differentiated SIEM deployments to clients

A Strategic Move for Next-Gen Cyber Defense

In an era of constant compromise, the ability to **detect early, respond fast, and customize intelligently** is no longer optional. SEC.co's launch of Custom SIEM reflects the market's demand for smarter, more adaptable security infrastructure.

Whether replacing a bloated legacy SIEM or building one from scratch, SEC.co offers the engineering support and domain expertise to help companies take back control of their cybersecurity architecture.

About SEC.co

SEC.co is a cybersecurity software company specializing in customizable, high-performance defense solutions for enterprise networks. From SIEMs to SOAR integrations, SEC.co empowers security teams with the tools they need to defend, detect, and respond—faster and smarter.

About DEV.co

[DEV](#) is a full-stack software development agency specializing in custom application development, data engineering, and AI-powered platforms. With deep expertise in [cybersecurity](#), cloud-native design, and scalable architectures, DEV.co partners with startups, enterprises, and government agencies to build mission-critical technology from the ground up. The DEV.co team brings a global, engineering-first approach to solving complex business problems with secure, flexible, and high-performance software.
