

Thememaker Announces Launch of Thunder AI, the World's First AI-Integrated Dashboard

Thunder AI introduces a new era in dashboard design with built-in AI chat (with speech-to-text) and AI-powered image generation. All within a ready-to-use HTML theme.

Ahmedabad, Gujarat Sep 12, 2025 (Issuewire.com) - Thememaker, a leading name in Web Application Development and UI/UX dashboard design, has officially launched **Thunder AI**, the world's first **AI-integrated dashboard theme**. With this release, **Thememaker** brings artificial intelligence into the heart of frontend design systems, combining familiar dashboard layouts with cutting-edge AI interaction.

Thunder AI is delivered as a complete HTML/CSS/JS theme and includes two distinct AI modules:

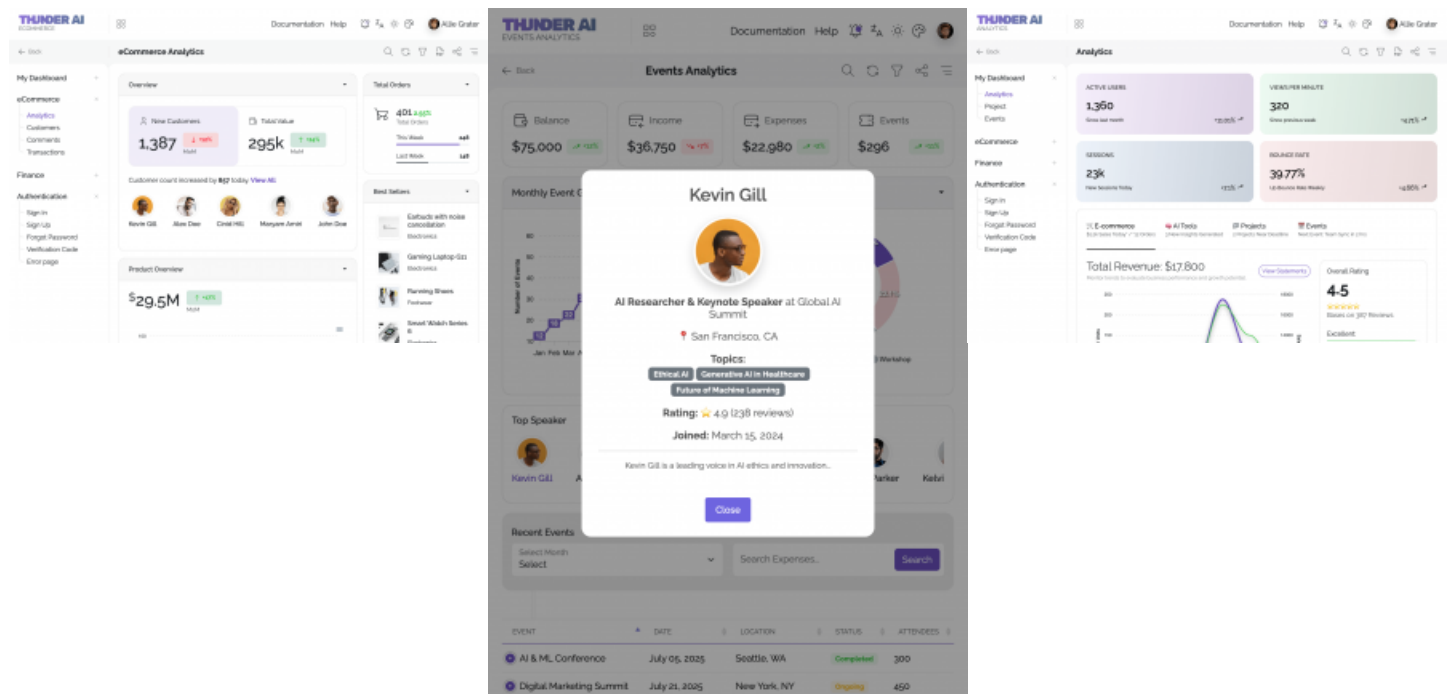

- **AI Chat with Speech-to-Text:** A modern, built-in chat interface that allows real-time conversation with AI agents, enhanced by voice-to-text functionality for faster interaction.
- **AI Image Generation:** A creative module that lets users generate images directly within the dashboard environment.

Unlike traditional dashboards that act as static layouts, *Thunder AI* makes artificial intelligence a functional element of the interface itself. This means developers, startups, and enterprises can now launch AI-ready applications with minimal setup — saving both time and development costs.

“Our vision with *Thunder AI* was to push the boundaries of what a dashboard theme can offer,” said [Chintan Thummar](#), CEO of [Thememakker](#). “For the first time, teams can use an out-of-the-box HTML dashboard that already has AI chat and AI image generation integrated, no separate systems required.”

The launch of *Thunder AI* marks a new milestone for Thememakker, known for creating premium, production-ready frontend templates. By blending modern design with practical AI modules, the company aims to empower developers to build smarter applications faster.

Thunder AI is now available exclusively through [ThemeForest](#) market.
