

Beyond Facials introduces The Biohacking Facial - Nanoneedling Exosomes Facial

Beyond Facials Introduces Revolutionary Biohacking Facial- nanoneedling with exosomes in Santa Monica, along with the Fall Skin Reset Hydrafacial Deals event in Santa Monica

Santa Monica, California Oct 14, 2025 ([Issuewire.com](https://www.issuewire.com)) - [Beyond Facials](#), a skincare studio at 2730 Wilshire Blvd in Santa Monica, debuted The Biohacking Facial—a nanoneedling treatment with human umbilical cord-derived exosomes.

This advanced non-invasive procedure surpasses traditional PRP microneedling by delivering over 300 growth factors for deep regeneration through a painless process, creating microscopic channels in your skin's surface—no trauma, no downtime, and zero downtime recovery. This redefines anti-aging care for busy clients.

What are Exosomes: Exosomes are your skin's ultimate biohacking tool —tiny, powerhouse vesicles (30-200nm) released by stem cells, packed with over 300 growth factors, proteins, lipids, and RNA.

The core of this treatment is a nanoneedling technique that utilizes tiny needles to create nano-channels

in the skin, resulting in pore-minimizing, advanced exfoliation, and smoother, more sculpted, and luminous-looking skin, as well as enhanced penetration and absorption of topical skincare products. At Beyond Facials, we use the **SkinStylus®** nano-infusion device, an **FDA-approved** system designed to improve skin texture, minimize fine lines, and reduce acne scars.

Harnessing the power of 300+ growth factors, including Fibroblast Growth Factor (FGF) and Vascular Endothelial Growth Factor (VEGF), the nanoneedling with Exosomes Facial stimulates fibroblast activity for rapid skin repair and lasting radiance. Unlike PRP-based treatments, which rely on 12-20 variable growth factors and require blood draws, this ethically sourced, lab-purified exosomes delivers visible results in 5-7 days, with effects lasting 6-12 months. The non-invasive nanoneedling process (0.15-0.25mm) ensures 97% serum absorption, offering instant plumping and glow without recovery time. Exosomes trigger 100x faster collagen production than nanoneedling alone, tackling fine lines, scars, and sagging with science-backed precision.

"Our clients want effective, zero-downtime options without red bloody dots all over the face," shared Elvira, co-founder and lead esthetician at Beyond Facials. "This treatment gives them superior results without discomfort and excessive peeling after — it's transforming how we approach aesthetics."

Beyond Facials has built its reputation on client-focused, advanced skincare that blends innovations and comfort. Early feedback highlights enhanced elasticity, hydration, and clarity across all skin types, with customizable options for targeted concerns.

As non-invasive demand surges, this facial positions the studio as an industry pioneer for health-savvy Angelenos. Bookings are now open, with recommended packages of 2-3 sessions for optimal results.
