

BioSkin® Redefines Orthopedic Bracing with Advanced Comfort and Performance Technology

BioSkin® Unveils Next-Gen Orthopedic Braces for Active Recovery and Pain-Free Performance

Medford, Oregon Nov 3, 2025 ([Issuewire.com](https://www.issuewire.com)) - As more people seek smarter ways to recover from injury and stay active, [BioSkin®](https://www.bioskin.com), a leading U.S. manufacturer of orthopedic braces and compression gear, is reshaping how the world moves. Under the leadership of **Tanner Cropper**, BioSkin is introducing the next generation of medical-grade supports — engineered for athletes, patients, and everyday movers who refuse to be limited by pain.

Innovating Recovery Since 1994

Founded in Southern Oregon, BioSkin has built a global reputation for designing lightweight, breathable, and clinically proven bracing systems that **support without restricting**. Every BioSkin brace is crafted from premium hypoallergenic materials and designed to contour naturally to the body — delivering compression, stabilization, and comfort in one seamless experience.

“We design every brace with one goal in mind — to help people move without pain,” said Tanner Cropper, Owner of BioSkin. “Whether it’s recovering from surgery, managing chronic joint pain, or training for your next race, our products are built to restore confidence and mobility.”

Engineered for Motion

At the heart of every BioSkin product lies the brand’s proprietary **Tri-Laminate™ Material Technology**, a three-layer fabric that provides targeted compression, moisture control, and flexibility. Unlike traditional neoprene braces that trap heat and irritate skin, BioSkin’s materials are **lightweight, breathable, and latex-free**, ensuring extended comfort during both rest and performance.

The lineup covers every major support need — including **ankle & foot, knee, wrist, back, hip, and elbow braces** — all trusted by orthopedic specialists and physical therapists worldwide. Each model is clinically designed to aid recovery from common injuries such as **ACL tears, plantar fasciitis, sciatica, carpal tunnel, and tendonitis**.

Where Science Meets Everyday Comfort

BioSkin's in-house R&D and partnerships with rehabilitation experts ensure that every brace aligns with the latest orthopedic research. Their new line introduces:

- **Precision-cut ergonomic shaping** that mirrors joint movement.
- **Medical-grade compression zones** to improve circulation and reduce swelling.
- **Non-slip, hypoallergenic liners** for all-day wear without irritation.
- **Eco-friendly manufacturing practices** that reduce material waste.

This innovation-driven approach positions BioSkin as a pioneer in orthopedic gear that not only heals but enhances performance — helping active individuals return to doing what they love, faster and stronger.

Empowering Patients and Professionals

Beyond product innovation, BioSkin is investing heavily in education and community support. The company's **Injury Education Center** — available at bioskin.com — offers detailed guides on injury prevention, rehabilitation exercises, and bracing selection tips written by clinical experts.

Through its **Professional & Wholesale Program**, BioSkin also equips physical therapists, chiropractors, and sports clinics across the U.S., Canada, Australia, and the U.K. with preferred pricing, bulk ordering, and training resources. This ensures that both medical professionals and patients receive the highest-quality support products available.

“We work directly with clinicians who see first-hand how the right brace can change a patient's recovery experience,” Cropper explained. **“Our role is to give them the tools and technology that make that recovery faster, safer, and more comfortable.”**

For Every Body, Every Lifestyle

BioSkin's philosophy is simple: **everyone deserves to move freely**. Whether you're a runner returning from an ankle sprain, a nurse on long shifts managing back pain, or an older adult seeking gentle joint stability — BioSkin braces are designed to move with you, not against you.

Their gear is used globally by professional athletes, weekend warriors, and post-operative patients alike, offering reliable support for **recovery, prevention, and performance**.

About BioSkin®

Founded and headquartered in **Medford, Oregon**, [BioSkin®](https://bioskin.com) designs and manufactures premium orthopedic braces, compression sleeves, and recovery supports that combine advanced material science with ergonomic design. Serving both consumers and medical professionals in more than 40 countries, BioSkin is dedicated to helping people **move beyond pain** through innovation, education, and human-centered design.
