

Crypto Checker Launches: Independent and Anonymous Tool for Verifying Crypto Assets

Dubai, United Arab Emirates Oct 7, 2025 ([Issuewire.com](https://www.issuewire.com)) - As counterfeit tokens such as so-called “fake stablecoins” increasingly threaten investors, a new solution has emerged. Crypto Checker, developed by a former Binance engineer, is designed to deliver complete independence from exchanges and full user anonymity, enabling investors to instantly verify the authenticity of their digital assets.

Unlike traditional methods that require sending tokens to an exchange or third-party service, Crypto Checker operates directly within the user’s own wallet. This ensures that no asset information is ever exposed to outsiders while maintaining a seamless user experience.

Key features include:

Perfect Independence & Anonymity – Verification is performed entirely within the wallet. No exchange involvement, no third-party oversight, no exposure of asset data.

Speed – Real-time checks are completed within seconds, allowing users to verify tokens instantly upon receipt.

Low Cost – Only the minimum required gas fee is needed. No extra charges, no hidden costs.

Currently, Crypto Checker focuses on USDT (ERC20 / TRON), one of the most commonly targeted tokens by counterfeiters. The development roadmap includes expanding coverage to USDC and a wide range of additional cryptocurrencies and networks.

The development team states: “Our vision is to make it possible for anyone to hold digital assets with complete confidence. By combining independence, privacy, speed, and affordability, we aim to set a new global standard in crypto security.”

About SolutLab

SolutLab is a blockchain technology innovator dedicated to enhancing the safety and transparency of digital asset markets. With expertise in blockchain analytics and risk management, the team delivers cutting-edge tools that empower investors and institutions worldwide.
