

Delta4 Launches MCP360: A Unified Gateway That Gives AI Agents Access to 100+ Tools via single configuration

Delta4 has launched MCP360, a unified gateway that solves a critical problem facing AI agents: accessing the tools they need without manual configuration or context degradation.

Mohali, Punjab Nov 11, 2025 ([IssueWire.com](https://www.issuewire.com)) - AI agents today are missing the capabilities they need to complete real-world tasks. To add these capabilities, teams must manually configure each tool separately. But as more tools are added, the AI's context window becomes cluttered, degrading response quality and performance.

MCP360 eliminates this trade-off. The platform provides one unified gateway that automatically handles 100+ tools based on what each task requires—without manual configuration and without bloating the context window.

Modern AI agents can chat, but struggle to complete end-to-end tasks because they lack access to external tools. When teams try to solve this by adding tools manually, they face these problems:

- **Configuration Overhead** Each tool requires separate setup, authentication, and ongoing maintenance. Development teams spend days or weeks manually configuring individual tools.
- **Context Degradation** Adding multiple tools to an AI's context window clutters available memory, reducing response quality and overall effectiveness.

- **Integration Complexity** Teams must build and maintain separate integrations for each tool, diverting resources from core product development.
- **Scalability Limitations** As organizations need more tools, the complexity multiplies. Each new tool adds another layer of configuration, authentication, and maintenance overhead.
- **Maintenance Burden** When external APIs change their endpoints or terms, internal teams must update each integration manually, leading to system breaks and downtime.

MCP360 eliminates these challenges by providing teams a single integration point into their AI system. This provides access to 100+ useful tools. When MCP360 adds new tools, existing users get access automatically without additional setup.

MCP360 automatically handles the right tools based on task requirements, eliminating the need for individual tool setup.

When external APIs change or break, MCP360 handles updates automatically, allowing development teams to stay focused on building features rather than fixing integrations.

MCP360 works with Claude Desktop, Cline, and any system supporting the Model Context Protocol (MCP) standard.

LEADERSHIP PERSPECTIVE

"Teams shouldn't be managing dozens of tool integrations to make AI work," said Rohit, Founder and CEO of Delta4. "MCP360 makes every integration as simple as copy and paste. Our goal is to remove technical friction so teams can focus on building intelligent, high-performing systems."

AVAILABILITY

MCP360 is available globally starting today. Organizations can begin using the platform immediately at <https://mcp360.ai>.

ABOUT MCP360

MCP360 is a unified gateway developed by Delta4 that connects AI agents to 100+ tools through a single integration. The platform automatically routes requests to appropriate tools while preventing context degradation, enabling AI agents to complete real-world tasks efficiently. Based in Mohali, Punjab, MCP360 serves developers, marketers, sales teams, SaaS teams, government organizations, and enterprises worldwide. For more information, visit <https://mcp360.ai>.
