

Dr. Udaya Jeewan: Cybersecurity Leader from EIU-Paris to Sri Lanka

Empowering Digital Innovation and Cybersecurity Excellence Across Borders

Wadi Al Kabir, Masqat Oct 22, 2025 ([IssueWire.com](https://www.issuewire.com)) - Dr. Udaya Jeewan: Passing the Message to the World About Cyberthreats and AI

By European International University, Paris — October 20, 2025

The digital era has redefined how humanity lives, learns, and connects — but it has also exposed us to an invisible battlefield where every click can become a potential risk. As artificial intelligence continues to reshape our world, **Dr. Udaya Jeewan**, a **dual PhD holder** from the **European International University (EIU-Paris)** and **Central Global University (CGU)**, is raising his voice to warn the world about the escalating danger of **cyberthreats** and the urgent need for ethical awareness in technology.

The Dual Nature of AI

From large-scale data breaches to sophisticated misinformation campaigns, cyberattacks are no longer isolated events — they are part of an evolving global ecosystem. Artificial Intelligence, with its unmatched speed and precision, can be used for both creation and destruction.

“Artificial intelligence is humanity’s greatest ally and its greatest test,” says Dr. Jeewan. “It can defend nations or dismantle them. The choice lies not in technology, but in how we guide it.”

Education: The Strongest Firewall

Dr. Jeewan believes that technology alone cannot secure the digital world; **education must stand beside it**. Empowering people with knowledge — about privacy, ethical data use, and responsible digital behavior — is the foundation of a safer cyber-future.

“A single informed mind can stop a thousand attacks,” he notes. “Awareness is not a luxury — it is our first line of defense.”

He advocates global initiatives that bring cybersecurity awareness into classrooms, workplaces, and policymaking circles, ensuring that citizens everywhere understand the shared responsibility of digital safety.

Harnessing AI for Protection

While AI can be weaponized by malicious actors, it can also serve as a force for good. Dr. Jeewan encourages researchers, developers, and world leaders to invest in **AI-driven defense systems** that can predict, prevent, and neutralize cyberattacks before they occur. He emphasizes that transparency and ethical responsibility must guide every innovation in this field.

A Global Call to Action

Dr. Jeewan’s message is simple yet powerful: cybersecurity is not confined to experts or institutions—it is **everyone’s responsibility**. He calls on nations, corporations, and individuals to unite in a worldwide movement that promotes digital ethics, shares intelligence, and builds resilience against the growing tide of cybercrime.

“We must choose awareness over ignorance, collaboration over isolation, and integrity over exploitation,” he asserts. “Only then can we ensure that technology serves humanity, not the other way around.”

As the world stands on the threshold of an AI-driven future, **Dr. Udaya Jeewan’s voice echoes a universal truth** — that innovation without conscience is vulnerability, but innovation with wisdom is security. His mission is clear: to awaken global consciousness and safeguard the digital age through knowledge, unity, and ethical progress.
