

Mirapacid Publisher 2025 (9.0) released

Bialystok, Podlaskie Oct 8, 2025 ([IssueWire.com](http://www.IssueWire.com)) - With Mirapacid Publisher software you can convert (print) any document to a set of images. Anyone can open your document across a broad range of hardware and software, and it will look exactly as you intended - with layout, fonts, and images intact. No one can modify or copy and paste your texts.

After installation on your PC, Mirapacid Publisher appears as a new virtual printer in your system. All the documents you print to this "printer" will be opened in a preview dialog. You scale the image, adjust hue, saturation and value, get rid of unused white borders, and do some other image processing. Then you can save results images to disk, email, upload to FTP or HTTP server, or print them to a real printer.

Mirapacid Publisher supports following output formats: PDF, JPEG, GIF, TIFF, BMP, PNG and TGA. When redirecting to a printer, reduce saturation to save color cartridge or increase value to save black ink. Use borders detector in manual mode to set printing area when you need to print only the document part you need.

Mirapacid Publisher adds icon to desktop. All the documents you drag and drop to this icon will be printed behind the scenes and processed by Mirapacid Publisher. Turn "Auto Send" on if you want Mirapacid Publisher to send images to chosen destinations without waiting for your input. If you want every document to be saved to an individual file, add {{DATE}}, {{TIME}}, {{IDENTITY}}, {{PAGE}} or {{JOB}} to the file name or path. They will be replaced with current date, time, some unique number, page number and print job id respectively.

Mirapacid Publisher is integration-ready software. All the settings can be easily managed from your software or script.
