Positrust (UG) Limited, the next chapter

Anchoring Global Liquidity with AI-Driven, Decentralized Settlement

Charlotte, North Carolina Oct 29, 2025 (Issuewire.com) - Over a decade ago, in 2014, the Positrust leadership established a top-tier finance technology firm. Today, as the world embraces the opportunities arising from Generative AI and geopolitical change, Positrust's core benefits are best delivered through multiple regulatory jurisdictions. In response, the Positrust Board has implemented a globalization strategy that decentralizes and virtualizes the corporate footprint — significantly improving market penetration, reducing regulatory exposure, and expanding access to capital markets.

Drawing upon extensive expertise in intelligent automation and artificial intelligence, Positrust has transitioned from a conventional technology engagement model to a virtualized, decentralized, autonomous model. This innovation expands client interaction capabilities and streamlines onboarding. The transformation, underway for some time, reached successful completion on July 28th, 2025.

Positrust's research and development activities are now integrated under Positrust.ai, its dedicated innovation platform. Core domain capabilities in foundational blockchain frameworks, farm-to-fork supply innovations, and mine-to-market value chain optimization have been de-domiciled and fully virtualized into a Decentralized Autonomous Organization (DAO).

To anchor this transition, Positrust Uganda Limited (PUL) has assumed responsibility for the Positrust online presence (www.positrust.com) and now serves as the legal entity through which trade-related activities are executed.
