

ReachStream Launches Chrome Extension and New Data Enrichment Feature

ReachStream introduces a Chrome extension and enhanced data enrichment features to streamline B2B workflows with real-time, accurate insights.

Jersey City, New Jersey Oct 10, 2025 ([Issuewire.com](https://www.issuewire.com)) - [ReachStream](#), a leading provider of B2B data solutions, has announced the launch of two new features designed to enhance the user experience and improve data access: a **Chrome Extension** for instant lead insights and an enhanced [Data Enrichment](#) capability for real-time contact and company intelligence.

The newly launched [Chrome Extension](#) enables users to extract and view verified contact and company data directly from their LinkedIn profiles. With one click, users can retrieve key details such as email addresses, phone numbers, company size, industry, and job titles—without leaving their current tab.

Additionally, ReachStream has introduced **enhanced Data Enrichment** functionality. This feature allows users to upload incomplete records and instantly enrich them with accurate, up-to-date information. It supports batch processing and ensures consistency across CRM platforms, helping sales and marketing teams maintain clean, actionable databases.

"These features are designed to save time and increase productivity for teams that rely on accurate data," said a spokesperson at ReachStream. "Whether it's accessing data on the fly or enriching existing records, users now have faster ways to get the insights they need."

Both tools align with ReachStream's focus on data accuracy, privacy compliance, and user-friendly usability.

About ReachStream:

ReachStream provides 150M+ verified B2B contact and company data to help businesses improve targeting, outreach, and engagement. Its platform supports sales, marketing, and recruitment professionals by delivering real-time, actionable insights.
