

Skywork Brings Your Work Tools Together

New Integration Powers Productivity Tools Across Microsoft 365, Google Drive and Notion

Bay Point, California Oct 12, 2025 ([IssueWire.com](https://www.issuewire.com)) - "From searching emails to creating calendar events, Skywork now executes tasks across your essential productivity tools."

Skywork today announced a major update connecting Microsoft 365, Outlook, OneDrive, Google Drive, and Notion to its productivity platform. This integration eliminates the need to switch between applications, allowing users to manage their digital workspace from a single interface.

After authorization, users can immediately:

- Query and send Outlook emails
- Create and manage Outlook Calendar events
- Access and store files across Google Drive and OneDrive
- Generate content within Microsoft 365
- Edit Notion pages seamlessly

"This update represents our commitment to creating tools that work where you work," said [EXECUTIVE NAME]. "We're eliminating the friction that occurs when moving between different applications."

The integration operates through Skywork's General mode, functioning as an execution layer across authorized tools. Early adopters report significant time savings, particularly in email processing and document management.

For organizations using multiple Microsoft services alongside Google Drive or Notion, the update provides a unified command center that maintains context across platforms.

This feature is now available to all Skywork users. For implementation details and best practices, visit the Skywork blog at [BLOG URL].

About Skywork

Skywork develops advanced productivity solutions that help professionals work more effectively across their digital ecosystem, enabling teams to focus on high-value work rather than digital administration.
