

Tedmos Revolutionizes Home Lighting with Its New Wireless Rechargeable Motion Sensing Solutions

Featuring a 12000mAh waterproof shower light, versatile RGB puck lights, and high-CRI art lights, the collection offers powerful, no-electrician-needed installation for bathrooms, closets, kitchens, and galleries.

Los Angeles, California Oct 6, 2025 ([Issuewire.com](https://www.issuewire.com)) - Tedmos, an innovative home solutions brand dedicated to the philosophy of "Simple Light, Simple Life," today announced the launch of its groundbreaking new collection of rechargeable, wireless lighting fixtures. This meticulously designed series directly addresses one of the most persistent challenges in modern homes: providing effective illumination in areas without pre-existing electrical wiring. The collection empowers homeowners to effortlessly brighten dim corners, enhance safety in wet areas, and beautifully accentuate decor without the cost and complexity of hiring an electrician.

The Ultimate Solution for Challenging Spaces: The Rechargeable Waterproof Shower Light

A common debate among homeowners is, "Should there be a light above the shower in a bathroom?" The answer is a definitive yes for both safety and ambiance, but installation has historically been a major barrier. Tedmos's flagship wireless [rechargeable ceiling light](#) is engineered to be the definitive answer. At its core is an unrivaled 12000mAh A+ Lithium battery, a powerhouse that sets a new industry standard. This impressive capacity translates to unparalleled user convenience, offering 60-100 days of operation in auto-sensor mode (based on 5-10 activations per day) or up to 15 hours of continuous, brilliant light on a single charge. This makes it a cost-effective and reliable long-term choice.

Designed specifically as a battery operated [waterproof shower light](#), the unit boasts a robust IP54 rating. This certification guarantees that the fixture is sealed against dust ingress and protected from water sprays from any direction, allowing for confident and safe installation directly in showers, bathrooms, covered patios, and other damp environments.

Intelligence is a key feature of this **battery operated ceiling light**. It incorporates a sophisticated

Motion + Daylight Dual Sensor system. The highly sensitive motion sensor provides a 16-foot, 360-degree detection range, instantly activating the light upon entry and automatically shutting it off 20 seconds after motion ceases. This is seamlessly paired with a daylight sensor that intelligently detects ambient light, keeping the light off during the day to conserve energy and ensuring it's ready to respond instantly when darkness falls. Users have full control to toggle the daylight sensor on or off via the remote or a button on the unit, tailoring its function to their specific needs, whether in a windowless closet or a sunlit hallway.

Lighting quality was paramount in its design. The fixture delivers a powerful 550 lumens of bright, flicker-free illumination through a specialized optical lampshade that diffuses light evenly and gently, ensuring it is always eye-friendly. Users can select from three distinct color temperatures—warm white (3000K), natural white (4000K), and cool white (6500K)—to match their mood or the room's function. Further customization is available through the included multifunctional remote, which allows for brightness adjustments from a soft 20% glow to a brilliant 100%, and setting 30 or 60-minute timers to prevent energy waste.

Perhaps its most revolutionary feature is the "Install in Minutes" design. Tedmos has eliminated the need for complex tools and professional help. The three-step installation is simple and secure, making this wireless shower light accessible to everyone. The main body of the light can be easily rotated and removed from its base for convenient USB charging. Its high Color Rendering Index (CRI 90+) ensures that colors under its light appear vibrant and true-to-life, enhancing visibility for tasks like applying makeup or choosing outfits. With a 50,000-hour LED lifespan, this light is a durable, long-term investment in home safety and convenience.

Versatile Illumination for Every Nook: Rechargeable Puck Lights

Addressing the popular query for "Under Cabinet Rechargeable Lights Solutions," Tedmos introduces its highly versatile [Rechargeable puck lights](#), also known as push lights or tap lights. These compact yet powerful lights are designed to bring clarity and color to often-neglected spaces like under cabinets, inside closets, and within display cases. Powered by a high-density 2400mAh Grade A+ Lithium-ion battery and featuring modern USB-C charging, these lights offer up to 12 hours of continuous lighting at maximum brightness and fully recharge in just 3 hours.

These are not just simple spotlights; they are tools for creating atmosphere. Each **tap light rechargeable** unit offers 13 captivating static color options and two dynamic RGB modes. SMOOTH mode gracefully cycles through the color spectrum, while FADE mode creates a gentle "breathing" effect with a single color. Control is effortless, either by tapping the lens to turn on/off and cycle through primary colors or by using the comprehensive remote for fine-tuned color selection, precise brightness control, and setting 30/60-minute timers. A smart memory function recalls the last brightness setting, adding a layer of convenience.

Installation is ingeniously simple. A strong magnet is built into the back of each light, allowing it to snap securely onto the included metal mounting strips or any magnetic surface like a refrigerator. This makes the rechargeable push lights incredibly easy to remove for charging and reposition as needed. Their utility extends far beyond the kitchen, serving as excellent **under cabinet lights**, display case lights, wall sconces, or even as visual aids like classroom voice level lights.

Elevating Art and Decor: The Rechargeable Picture Light

For art collectors and interior design enthusiasts asking, "How do you get good lighting for wall

pictures?" and concerned if "LED picture lights damage artwork?", Tedmos presents its elegant [Rechargeable picture lights](#). This solution is designed to highlight wall art with museum-quality illumination while ensuring its preservation. The built-in 2600mAh rechargeable battery eliminates unsightly cords and the recurring cost of disposable batteries, lasting up to 12 hours at its brightest setting.

The key to its superior performance is the light quality. This **battery art light** produces 150 lumens of clear, focused light with an exceptional CRI of over 90%. This high color fidelity ensures that the subtle hues and details of paintings, photographs, and posters are rendered accurately and vividly. The LED technology is a cool light source, emitting no harmful UV or IR radiation, thus protecting precious artwork from fading and damage over time.

Dual control options provide ultimate convenience. The included remote allows for easy adjustment of 13 color options, brightness levels, and a timer function (15/30/60/120 minutes) from across the room. For quick adjustments, a touch control is also integrated into the light itself. Installation is versatile, with options to use the included bracket with screws for a secure wall mount or strong double-sided tape for a drill-free setup. This makes it an ideal rechargeable gallery wall light for creating a sophisticated and cohesive display. Whether used as a **picture light with remote** or an under-shelf accent, it adds a touch of class to any space.

About Tedmos:

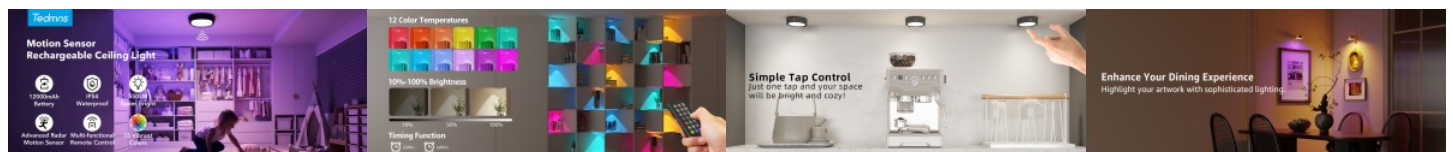

Since 2018, [Tedmos](#) has operated on the principle "Simple Light, Simple Life." We believe good design is never complicated. At Tedmos, we are dedicated to helping customers add beauty and functionality to their homes in the easiest and most cost-effective way. This new collection of rechargeable lighting is a testament to that mission, offering wise, durable, and elegant solutions to brighten every corner of life.
